ES EXECUTIVE SUMMARY

Engineering and Environmental Solutions Joint Venture (EES JV) has completed a Phase I Environmental Site Assessment (ESA) to support potential redevelopment of the parcel located at 77 Westchester Avenue in Pound Ridge, New York (the Site). The Site is comprised of tax parcel 9454-9 and totals approximately 0.34 acres. Figure 1 depicts the Site's location.

The Site is developed with a 4,864-square foot, two-story, mixed-use building that is currently occupied by Pound Ridge Auto Body and Town and Country Auto Repair Shop on the first story, and a vacant apartment on the second story. The auto body and repair shop activities require the use and storage of hazardous materials including oils, lubricants, paints, solvents, fuels, and petroleum products. One 275-gallon aboveground storage tank (AST) is used to store No. 2 fuel oil. An out-of-service 275-gallon fuel oil AST was also formerly used to store No. 2 fuel oil. Historically, Site operations as a gasoline filling station included the use of nine underground storage tanks (USTs), all of which have been removed or abandoned.

EES JV reviewed historical documents dating back to 1892 (Sanborn Maps, aerial photographs, topographic maps, city directories, municipal files, and previous environmental reports) to identify the historical use of the Site and surrounding area. Previous Site activities include its use as a gasoline filling station. Historical neighboring businesses included a dry cleaner and gasoline station. EES JV reviewed federal and state environmental database records, researched local municipal files, conducted interviews with Town officials, and performed a Site inspection to identify environmental conditions at the subject property.

The Site was identified in multiple environmental databases, including databases established to track petroleum service stations, underground and above-ground storage tanks in New York, leaking storage tanks in New York, and liens placed on properties in New York. Additionally, the Site was the source of several spill records on file with NYSDEC, including:

- Spill #9412600 – recorded in December 1994. This spill number is associated with a release of petroleum constituents (gasoline) that impacted numerous potable water supply wells in Scotts Corners, first discovered in 1993. Subsurface investigations performed by NYSDEC in 1995 attributed groundwater contamination to the Shell service station operating at 66 Westchester Avenue, but did not rule out potential contributions from the

Site (operating at the time as a Texaco service station). The extent of groundwater contamination emanating from the Site was determined to originate from the pump and UST area and extend approximately 30 feet off site to the south. Remedial actions were taken to reduce concentrations of VOCs in soil and groundwater. However, EES JV did not encounter information regarding the length of time that this system was in operation, or whether contaminant levels were reduced to levels appropriate for unrestricted use. According to NYSDEC records, this spill is still open.

- Spill #9507568 – recorded in September 1995 after the measurement of 6 inches of free product in a monitoring well located on the Site. Subsequent remedial efforts reportedly improved the quality of groundwater and reduced the amount of free product in the well. This spill was closed on March 27, 2013, however the concentration of petroleum constituents in Site groundwater is currently unknown.
- Spill #0204941 – recorded in August 2002 after the detection of gasoline contamination in soils during UST removal activities. Contaminated soil was removed from the Site for off-site disposal, and post-excavation confirmatory soil samples collected from the tank grave verified the removal of impacted soils. This spill number was closed on November 12, 2002.
- NY LIENS #94-12600 – This database lists a \$484,416 lien against Town and Country Auto Repair. Information provided by the Town Supervisor indicated that this lien was placed by the Town for failure to pay taxes. Additionally, interviews with Town officials and the Site owner revealed that a lien for \$200,000 was placed on the property, presumably to recover environmental costs incurred by NYSDEC associated with Spill #9412600.

Based on the findings of this Phase I ESA, EES JV has identified the following recognized environmental conditions (RECs):

REC #1 – Spill #9412600/#9507568: Environmental sampling conducted in 1994 revealed contamination in several potable water supply wells in the Scotts Corners section of Pound Ridge, specifically in wells serving businesses on Westchester Avenue and homes located on Trinity Lane, Lower Trinity Pass Road, and Trinity Pass Road. This environmental sampling was prompted when petroleum contamination was detected during 1993 in a groundwater sample

collected from the Pound Ridge Cleaners' well located at 72 Westchester Avenue. Subsequent to the 1994 groundwater sampling event, NYSDEC assigned Spill #9412600 to the release.

In 1995, NYSDEC contracted Land Tech Remedial, Inc. (LTR) to investigate gasoline station operations at 66 and 77 Westchester Avenue (Shell and Texaco gas stations, respectively). The objective of the investigation was to determine the potential source(s) of contamination impacting local drinking water wells. LTR's investigation included the installation of three overburden monitoring wells, two bedrock monitoring wells, and 33 soil borings on the Site. LTR also concurrently investigated the Shell station at 66 Westchester Avenue. Soil and groundwater samples were analyzed for the presence of volatile organic compounds (VOCs).

Benzene, ethylbenzene, toluene, and xylenes (BTEX) compounds and methyl tert-butyl ether (MtBE) were detected in soil and groundwater (overburden and bedrock) samples collected from both of the gasoline station properties. LTR concluded that the Shell station "appears to be the principle [*sic*] contributor" of groundwater contamination to potable wells in Scotts Corners, however the Site was not ruled out as a potential contributor to contamination in potable water supply wells. At the conclusion of investigative activities, a \$200,000 lien was reportedly placed against the property by NYSDEC to cover site assessment and remedial actions conducted in response to Spill #9412600.

In September 1995, additional environmental investigations identified 6 inches of free product in a monitoring well located on the Site. NYSDEC assigned Spill #9507568 to this release. Town and Country Auto Repair contracted LTR to address Site contamination. LTR designed a soil vapor extraction/air sparging (SVE/AS) system to remediate petroleum contamination in Site soil and groundwater. The SVE and AS systems commenced operation in May and July 1996, respectively. In a September 1996 quarterly monitoring report, LTR concluded (based on sampling data) that groundwater quality had improved at the Site, primarily as a result of the remediation system in place. The remediation system is no longer operating and its components were not observed during a 2016 site reconnaissance. Spill #9507568 was closed on March 27, 2013, however the concentration of petroleum constituents in Site groundwater is currently unknown.

Although Site contamination levels have been reduced, Spill #9412600 remains active for the Site and surrounding area. There is no documentation that contaminant levels have been reduced to levels suitable for unrestricted use or unlimited exposure.

REC #2 – On-Site Dry Well: EES JV observed a concrete-sealed dry well in the parking lot to the east of Pound Ridge Auto Body (Figure 2). According to the Site owner, floor drains in the garage bays of Town and Country Repair Shop and Pound Ridge Auto Body formerly channeled runoff into to the dry well. In correspondence between NYSDEC and the property owner in 2002, it was noted that a sink used to clean parts with degreasers was also connected to the dry well. The sink and associated piping were reportedly removed on June 10, 2002. In addition, the floor drains were reportedly sealed with concrete and the dry well abandoned on June 10, 2002. It is unknown whether environmental investigations were conducted prior to abandoning the sink, floor drains, and dry well. The illicit discharge of liquids through the sink and floor drains into the dry well may have resulted in a release of contaminants to the environment.

HREC – Spill #020451: In August 2002, IRA D. Conklin & Sons, Inc. of Newburgh, New York (IDC) removed three gasoline USTs and one diesel UST associated with former fueling station operations at the Site. During UST removal, Town and Country Auto Repair personnel “legally abandoned” one 1,000-gallon fuel oil UST. This fuel oil UST was abandoned in place because it is located in the rear garage bay and could not be removed without compromising the building.

USTs were reported to be in “fair condition” with “pitting and corrosion present”. IDC discovered gasoline contamination in the tank graves due to UST failure, and NYSDEC Spill #020451 was assigned to the release. A total of 176.01 tons of gasoline-contaminated soil was removed and disposed of at TPS Technologies, Inc., in New Windsor, New York. Confirmatory soil samples collected from the bottom of the excavation indicated that contaminated soil had been removed.

IDC observed an oily sheen on groundwater entering the tank excavation. IDC recommended groundwater sampling to determine if groundwater was impacted; however, reviewed reports do not indicate whether groundwater monitoring was conducted. Spill #020451 was closed on November 12, 2002. This condition is considered a historical REC because the spill was closed out to the satisfaction of the regulatory authority without the need for land use restrictions.

EES JV recommends Phase II investigations, including environmental sampling, to investigate the RECs identified in this Phase I report, specifically:

- Soil sampling (and if contamination is detected, monitoring well installation and groundwater sampling) in areas of suspected residual contamination to determine whether petroleum-related contamination is present above NYSDEC Soil Cleanup Objectives (SCOs). Areas targeted for investigation should include the former petroleum UST locations, the gasoline dispenser island, and the area downgradient (south) of the dispenser island previously identified within the extent of the gasoline plume associated with Spill #9412600. Soil and groundwater samples collected to address this REC should be analyzed for the presence of VOCs and petroleum constituents (both gasoline and diesel ranges).
- Soil sampling (and if contamination is detected, monitoring well installation and groundwater sampling) in the vicinity of the former dry well adjacent to Pound Ridge Auto Body, including along the length of underground pipe between floor drains and the sink that formerly discharged to the dry well. Soil and groundwater samples collected to address this REC should be analyzed for the presence of VOCs, polycyclic aromatic hydrocarbons (PAHs), petroleum constituents, polychlorinated biphenyls (PCBs), and heavy metals.
- Vapor intrusion screening in the on-site building to determine whether residual soil and groundwater contamination has the potential to impact indoor air quality.

1.0 INTRODUCTION

Engineering and Environmental Solutions Joint Venture (EES JV) has completed a Phase I environmental site assessment (ESA) to support potential redevelopment of a parcel located at 77 Westchester Avenue in Pound Ridge, New York (Site). Figure 1 depicts the Site location. This Phase I ESA was completed by EES JV on behalf of the Environmental Protection Agency (EPA) as a “grant of service” under EPA’s Targeted Brownfields Assessment (TBA) program. The grant was provided by EPA to the Town of Pound Ridge.

The following sections document the purpose of the ESA and provide a detailed scope of services, significant assumptions, limitations and exceptions, special terms and conditions, user reliance, and user obligations.

1.1 Purpose

The objective of this Phase I ESA was to assess environmental conditions at the subject property and vicinity for recognized environmental conditions (RECs) associated with the presence of petroleum products or hazardous materials in conformance with American Society for Testing and Materials (ASTM) E1527-13, “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process”. ASTM Standard Practice E 1527-13 defines a REC as:

“The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that post a material threat of future release to the environment. De minimis conditions are not recognized environmental conditions”.

ASTM E1527-13 further defines a historical recognized environmental condition (HREC) as:

“A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

1.2 Detailed Scope of Services

To meet the objectives of the Phase I, EES JV performed the following tasks:

- Reviewed New York State Department of Environmental Conservation (NYSDEC) and United States Environmental Protection Agency (USEPA) regulatory database listings concerning environmental conditions at and near the Site, as provided by Environmental Data Resources®, Inc. (EDR®) in a database search report.
- Contacted municipal officials at the Town of Pound Ridge, New York (Town) to obtain information pertaining to present and historical environmental conditions at the Site and adjacent environs.
- Visited the Westchester County Department of Health (WCDOH) on February 12, 2016 to review records pertaining to historic Site spills and, in particular, Spill #9412600.
- Reviewed available history of ownership and land usage records (including Sanborn® Maps and city directories) and interviewed people with knowledge of the Site to obtain past usage information.
- Reviewed available aerial photographs and topographic maps to aid in assessing local hydrogeology and present land use at the Site and vicinity.
- Visited the Site on January 6, 2016 to assess surficial and general environmental conditions at the Site and adjacent environs for evidence of RECs associated with past or present petroleum products or hazardous materials waste handling or storage activities.
- Prepared this report summarizing the results of the assessment.

1.3 Significant Assumptions

It is assumed that federal, state, and local records are generally complete and current. The preparer assumes that all individuals contacted and/or interviewed during the preparation of this Phase I ESA have responded in good faith. EES JV is entitled to rely on all information gathered during this scope of work.

1.4 Limitations and Exceptions

EES JV was not able to enter, or see inside of, the attic space in Town and Country Auto Repair.

Additional limitations of the assessment are provided in Appendix A.

1.5 Special Terms and Conditions

No special terms or conditions apply to this project.

1.6 User Reliance

User reliance is subject to the requirements of 40 CFR Part 312, ASTM E 1527-13, as noted herein.

1.7 User Obligations

As defined in ASTM E 1527-13, the user responsibilities, as applicable, are as follows:

- Identifying the scope of work;
- Deciding whether to use prior assessments;
- Checking title records for environmental liens and activity and use restrictions;
- Disclosing specialized knowledge and experience;
- Explaining why the purchase price is below market value, if it is discounted;
- Answering interview questions in good faith; and
- Providing information as outlined in Section 6 of ASTM E 1527-13, including completing the User Questionnaire.

For the purpose of this ESA, the “user” is defined as the Town of Pound Ridge. Richard Lyman, Town of Pound Ridge Supervisor, provided responses to the User Questionnaire. Mr. John DiFulvio (Site owner) provided responses to the Owner Questionnaire. This information was used to generate the information required to complete Section 3.0 as well as other sections of this report.

2.0 SITE DESCRIPTION

The Site is developed with a 4,864-square foot, two-story mixed use building. Several commercial garages used to repair vehicles occupy the first floor of the building. Pound Ridge Auto Body and Town and Country Auto Repair are located in the northern and southern portions of the building, respectively. A vacant three-bedroom apartment occupies the second floor space above the central portion of the building.

Businesses formerly operating on the Site included several gasoline fueling stations, including most recently a Texaco station. Underground storage tanks (USTs) for bulk petroleum storage have been removed or abandoned in place, and the pump island and associated dispensers have since been removed from the Site. Remnants of the dispenser pad are present along Westchester Avenue.

Records indicate that USTs were present from 1969 to 2002; however, a vintage photo on display at the Site depicts a Mobilgas gasoline station and repair garage with 1940s or 1950s vintage signs and gasoline dispensers. The most recent petroleum bulk storage application was filed in February 16, 1999. EES JV was unable to determine the exact timeframe the Site operated as a gasoline station.

2.1 Location and Legal Description

The Site is located at 77 Westchester Avenue in a mixed commercial and residential downtown area referred to on United States Geological Survey (USGS) topographic maps as “Scotts Corners” in Pound Ridge, New York. According to records obtained from the Pound Ridge Assessors Office, the 0.34-acre property is currently owned by Mr. John DiFulvio and is identified as tax parcel 9454-9. The Site is currently zoned as PB-A, which is reserved for “planned business” occupancy. The Site layout is depicted on Figure 2.

2.2 Title Records

EES JV obtained ownership records dating back to 1980 from the Town of Pound Ridge Assessor’s Office and on-line records available from the Office of the Westchester County Clerk. Copies of the Town Assessor’s property cards are included in Appendix B. EES JV did not conduct

a title search because this information was readily available via other sources. Site ownership history available from these sources is provided in the table below.

Date	Seller	Buyer	Deed Book/Page
11/15/1980	Anthony Pirone/Amerigo Prosio	Anthony Bernardo	07671/00295
2/2/1983	Anthony N. Bernardo	John DiFulvio/Gildo DiFulvio	07900/00351
8/13/2014	John DiFulvio/Gildo DiFulvio	John DiFulvio	540793074

2.3 Previous Environmental Investigations

The Site has been the subject of environmental assessment and remedial actions since 1995 when NYSDEC performed an investigation to determine the source of petroleum hydrocarbons that had impacted several potable water supply wells along Westchester Avenue. No environmental records were provided by the Town or property owner. EES JV filed a Freedom of Information Law (FOIL) request with the WCDOH, retrieved records at WCDOH's New Rochelle office, and reviewed these records to determine the environmental history of the Site. A summary of the reports reviewed by EES JV is provided in the following subsections.

2.3.1 Subsurface Environmental Site Investigation - July 1995

In 1995, Land Tech Remedial, Inc. (LTR) conducted a subsurface investigation on behalf of NYSDEC for the properties at 66 and 77 Westchester Avenue. The 66 Westchester Avenue property was occupied at the time by a Shell gasoline filling station. The Site (77 Westchester Avenue) was occupied by a Texaco gasoline filling station at the time. The objective of the investigation was to determine the source(s) of gasoline constituents detected in numerous potable water wells located in the Scotts Corners section of Pound Ridge.

Petroleum contamination was first detected in 1993 in a groundwater sample collected from the Pound Ridge Cleaners' well located at 72 Westchester Avenue. Additional sampling conducted in 1994 revealed contamination in potable wells serving businesses on Westchester Avenue and homes located on Trinity Lane, Lower Trinity Pass Road, and Trinity Pass Road. In December 1994, NYSDEC assigned Spill #9412600 to this release.

LTR conducted the subsurface investigation in February 1995. The investigation included the installation of three overburden monitoring wells, two bedrock monitoring wells, and 33 soil

borings on the 77 Westchester Avenue property (the Site). Soil and groundwater samples were analyzed for the presence of volatile organic compounds (VOCs). LTR also conducted a concurrent investigation on the Shell property at 66 Westchester Avenue.

Benzene, ethylbenzene, toluene, and xylenes (BTEX) compounds and methyl tert-butyl ether (MtBE), all contaminants typically associated with a release of gasoline, were detected in soil and groundwater (overburden and bedrock) samples collected from the Site. LTR concluded that a release of gasoline from the pump island and the UST area impacted the overburden aquifer, with the area of impact extending approximately 30 feet off Site beneath Westchester Avenue. LTR further concluded that the depth of the impacted on-site bedrock wells was similar to the depth of the impacted potable wells, and contamination from the on-site bedrock wells may have impacted off-site potable wells. It should be noted that 6 inches of free product was observed in MW-3 during June 1995. MW-3 is located immediately to the south of the former pump island.

LTR sampled potable water supply wells at the Texaco Station (77 Westchester Avenue - the Site) and the Shell Station (66 Westchester Avenue) during the 1995 investigation. LTR concluded that the Shell station “appears to be the principle [*sic*] contributor” of groundwater contamination to potable wells in Scotts Corners, however the Site was not ruled out as a potential contributor to contamination in potable water supply wells.

2.3.2 Groundwater Remediation System Reports

After the detection of petroleum contamination in soil and groundwater at the Site in 1995, John DiFulvio contracted LTR to provide environmental remediation services for the Town and Country Auto Repair Site. LTR designed a soil vapor extraction/air sparging (SVE/AS) system consisting of five soil vapor extraction points and five air sparging points to remediate petroleum contamination in soil and groundwater at the Site. Installation of the remedial system began in October 1995 and the SVE system commenced operation on May 17, 1996. The air sparging component of the system was added in July 1996.

LTR provided operations and maintenance of the SVE/AS system and sampled groundwater at the Site quarterly to monitor the effects of the remediation system. EES JV reviewed the *Third Quarter 1996 Groundwater Quality and Remediation System Report* prepared by LTR dated September 12, 1996. In August 1996, LTR gauged and sampled the four overburden monitoring

wells (MW-1, MW-2, MW-3, and MW-A) and one bedrock well (BR-1). Groundwater was determined to flow toward the west, which agreed with the initial hydrogeologic report completed in July 1996. BTEX compounds and MtBE were detected at concentrations greater than the New York State Extraction Guidance Values (EGVs) in groundwater samples collected from monitoring wells MW-2 and MW-3.

The analytical results of groundwater samples collected from the Site during August 1995 are summarized in the table below:

Well ID	Benzene	Toluene	Ethylbenzene	Xylenes	MtBE	Chlorobenzene
MW-1	ND	ND	ND	ND	6	ND
MW-2	11	200	23	2,110	200	ND
MW-3	230	1,900	140	2,100	9,000	ND
MW-A	ND	ND	ND	4.1	15	ND
BR-1	ND	ND	ND	ND	33	1.2
EGV	0.7	5	5	5	50	NA

All concentrations in parts per billion
 ND: Not Detected
 NA: Not Applicable
 EGV: Extraction Guidance Value for New York State

LTR concluded the groundwater quality at the Site had improved since June 1995. LTR further concluded that these improvements were a result the remediation system in place. Free phase product was not detected in MW-3. There were no other quarterly system monitoring reports available for review by EES JV. It is not known when the remediation system was decommissioned; however, Spill #9412600 remains active for the Site and surrounding area.

2.3.3 UST Inspection - May 29, 2002

EES JV reviewed an email from Karen Magnuson of WCDOH to the EPA documenting the findings of a tank inspection of Town and Country Auto Repair, which occurred on May 28, 2002. Ms. Magnuson observed and documented numerous violations at the Site. The UST violations included unregistered tanks, tanks overdue for testing, no inventory records, no pressurized pipe leak detection, no secondary containment of pipes, and no inspection of monitoring systems. The AST violations included no tank labels and no monthly inspection. A notice of hearing was administered to Town and Country Auto Repair to appear on June 26, 2002 and address the violations described above.

2.3.4

Dry Well Violation Letter - July 1, 2002

EES JV reviewed a letter from WCDOH to John DiFulvio informing him that the sink in the bay area of the Town and Country Auto Repair facility discharges to a dry well, which was in violation of EPA's underground injection regulations. The letter indicates that degreasers were used in the sink to clean parts.

In this letter, NYSDEC ordered Mr. DiFulvio to plug the sink by July 20, 2002 to prevent further discharge of contaminants to the environment. The review of files provided by WCDOH revealed that Mr. DiFulvio responded to the letter on July 8, 2002 noting that the sink and associated piping was removed on June 10, 2002. In an interview with Mr. DiFulvio during 2016, he reported that the floor drains that discharged to the dry well were also plugged on this date.

EES JV did not review any records to suggest Town and Country Auto Repair performed any assessment or remediation prior to sealing the sink or floor drains. There were no records made available through the FOIL request to indicate whether EPA performed a follow-up inspection or if any further enforcement action was taken by EPA to address the illicit discharge.

2.3.5

UST Closure Report – September 30, 2002

IRA D. Conklin & Sons, Inc. (IDC) of Newburgh, New York prepared a UST closure report for Town and Country Auto Repair dated September 30, 2002. In August 2002, IDC removed two 4,000-gallon gasoline USTs, one 6,000-gallon gasoline UST, and one 6,000-gallon diesel UST from the Site. USTs were reported to be in "fair condition" with "pitting and corrosion present", and during UST removal, IDC discovered gasoline contamination in the tank graves due to UST failure. NYSDEC Spill #020451 was assigned to the release. In addition, IDC noted that Town and Country Auto Repair personnel "legally abandoned" one 1,000-gallon fuel oil UST. This fuel oil UST was abandoned in place because it is located in the rear garage bay and could not be removed without compromising the building. Figure 2 shows the location of the abandoned fuel oil AST.

IDC excavated and stockpiled contaminated soil for off-site disposal. PID screening conducted to characterize contaminated soil during excavation produced VOC values up to 223 parts per million (ppm). A total of 176.01 tons of gasoline-contaminated soil was removed and disposed of

at TPS Technologies, Inc. in New Windsor, New York. Confirmatory soil samples collected from the bottom of the excavation indicated that contaminated soil had been removed.

Groundwater was encountered at approximately 15 feet below ground surface (bgs). IDC observed an oily sheen on the surface of the groundwater. IDC recommended groundwater sampling from Site monitoring wells to determine if groundwater was impacted from the release; however, reviewed reports do not indicate that groundwater monitoring was conducted. Spill #020451 was closed on November 12, 2002.

2.4 Site and Vicinity General Characteristics

The Site is located in the downtown area of Pound Ridge referred to as Scotts Corners. Site zoning is PB-A, which is defined as “planned business” zoning for commercial uses. The Site is bordered by Westchester Avenue to the south, a vacant commercial building to the east, a Town-owned parking lot to the north, and residential properties to the west. Site access is unrestricted and can be gained from the south via Westchester Avenue and from the north by the Town-owned parking lot.

The topography at the Site is generally flat. The Site is not located within the 100- or 500-year flood zones, or within national or state wetlands.

2.5 Current Use of the Site

The Site is currently used as an automobile repair shop and an auto body shop. A vacant three-bedroom apartment is located on the second floor of the on-site building.

2.6 Descriptions of Structures, Roads, or Other Improvements on the Site

The Site contains a two-story 4,864-square foot multi-use building. The building consists of concrete block construction with a slab-on-grade foundation (no basement). The exterior is finished with a block, brick, and metal façade and a flat tar-and-gravel roof.

Town and Country Auto Repair occupies the southern repair bays (closest to Westchester Avenue) and Pound Ridge Auto Body occupies the rear repair bays (in the northern portion of the building). A vacant three-bedroom apartment is located on the second floor. An asphalt parking

lot surrounds the building to the north, east, and south. A partial fence runs along the southwest border of the property.

The apartment has been vacant for approximately 10 years. Interior spaces are finished with hardwood floors and sheetrock/plaster walls. An open deck accessed through the apartment is present on the southern portion of the building.

Electrical service is provided via overhead lines from Westchester Avenue. The Pound Ridge Auto Body portion of the building is heated via a forced hot air system that includes a 275-gallon fuel oil AST and boiler located in the utility room in the northwestern portion of the building. A similar system, formerly used to heat Town and Country Auto Repair and the apartment, is no longer in use. Town and Country Auto Repair is currently heated by space heaters and the apartment is currently not heated.

Water is supplied via a private well located along the southwestern corner of the building. A septic system tank is located along the northeast wall of the building.

The former vehicle fueling island is located in the parking lot south of the entrance into Town and Country Auto Repair. A monitoring well was observed in the parking lot between Westchester Avenue and the old vehicle fueling station. This monitoring well is filled with soil and not usable. Refer to Figure 2 for the Site layout.

2.7 Current Use of Adjoining Properties

A commercial property (Dynax Corporation) abuts the Site to the west, a commercial office building (occupied by Healing Home Foods) abuts the Site to the east, a Town-owned parking lot abuts the Site to the north, and Westchester Avenue abuts the Site to the south. Pound Ridge Cleaners and DiNardo's Ristorante Italiano are located to the south across Westchester Avenue.

3.0 USER PROVIDED INFORMATION

The following subsections summarize the user information provided to EES JV by Richard Lyman, Town Supervisor for the Town of Pound Ridge. A copy of the User Questionnaire is included in Appendix C.

3.1 Environmental Liens or Activity and Use Restrictions

The user is not aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state, or local law. Although not an environmental lien, the user is aware of a \$484,416 lien on the property placed by the Town due to back taxes.

EES JV conducted additional environmental liens research via interviews, municipal file reviews, and federal and state database reviews. EDR[®] reported that the Site is listed in the NY LIENS database due to the \$484,416 lien on the property. According to the EDR[®] database listing, the lien was placed on the property in 1999, and the lien is notated by EDR[®] with a reference to Spill #94-12600.

EES JV did not identify any activity and use limitations (AULs) for the Site.

3.2 Specialized Knowledge

The user does not have any specialized knowledge or experience related to the Site or nearby properties.

3.3 Commonly Known or Reasonably Ascertainable Information

The user was not aware of any commonly known or reasonably ascertainable information pertaining to environmental concerns at the Site except for the UST removal and previous remediation work along Westchester Avenue.

3.4 Valuation Reduction for Environmental Issues

The user does not expect valuation reduction due to environmental conditions.

3.5 Owner, Property Manager, and Occupant Information

Mr. John DiFulvio owns and operates Town and Country Auto Repair. Mr. Thomas H. Dubay operates Pound Ridge Auto Body. Together, they both provided the following information regarding environmental management at the Site:

- Abandoned floor drains located in the garage bays formerly channeled water to a dry well located in the parking lot on the east side of the building. An unknown contractor sealed the drains and dry well with concrete on June 10, 2002.
- Waste oil produced by Town and Country Auto Repair is collected in 5-gallon containers and donated to a friend to be burned in a waste oil furnace.
- Pound Ridge Auto Body collects hazardous waste generated in their parts cleaner into a 5-gallon container for off-site disposal. Waste generated is primarily from cleaning paint spray guns, and Safety-Kleen is contracted for off-site waste disposal as needed.
- Town and Country Auto Repair stores car batteries, paints, lubricants, tires, gasoline, and aerosol cans throughout the auto repair shop. These materials are stored without secondary containment.
- Pound Ridge Auto Body stores hazardous materials associated with vehicle repair (paint, solvents, cleaners, etc.) in a flammable storage cabinet.
- The petroleum spill (NYSDEC Spill #9412600) at 66 Westchester Avenue caused contamination of potable water wells in Scotts Corners. Mr. DiFulvio claimed the well in front of the 77 Westchester property was not contaminated. An SVE/AS remediation system was installed onsite in 1995 to remediate contaminated soil and groundwater. Groundwater conditions improved after the installation of the system and it was eventually removed. The SVE/AS system was not present during EES JV's site visit.

Mr. DiFulvio completed the Owner Questionnaire which is included in Appendix C.

3.6 Reason for Performing Phase I

The Town of Pound Ridge is performing an environmental assessment to satisfy due diligence requirements prior to acquiring the Site for back taxes. Currently, the Town does not have any redevelopment plans for the Site.

3.7 Other

The user does not know of the presence or likely presence of additional contamination at the property other than the environmental conditions mentioned above.

4.0 RECORDS REVIEW

The following sections document the information gathered during review of available environmental records, physical setting sources, and historical site use information.

4.1 Standard Environmental Record Sources

EES JV reviewed federal and state environmental records in the form of an environmental database report provided by EDR®. A copy of the database report is included as Appendix D. EES JV obtained additional information from other municipal and state records. As per ASTM E1527-13, the databases reviewed, and the search radius for each database, are listed below.

Database List	Search Distance from Subject Property (miles)
Federal, state, and tribal-equivalent National Priority List (NPL)	1
Federal Delisted NPL	0.5
Federal, state, and tribal-equivalent Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)(SHWS)	0.5
Federal CERCLIS - No Further Remedial Action Planned (CERCLIS - NFRAP)	0.5
Federal Resource Conservation and Recovery Act (RCRA) corrective action (CORRACTS) facilities	1
Federal RCRA non-CORRACTS treatment, storage or disposal (TSD) facilities	0.5
Federal RCRA generators - small quantity (SQG), large quantity (LQG), and conditionally exempt (CESQG)	Site and adjoining
Federal, state, and tribal-equivalent institutional controls/engineering controls (IC/EC) registries	Site and adjoining
Federal Emergency Response Notification System (ERNS)	Site only
State and tribal Superfund Sites	0.5
State and tribal landfill and/or solid waste disposal sites (LF/SWF)	0.5
State and tribal leaking storage tanks (NY LTANKS)	0.5
State and tribal registered storage tanks (NY AST/NY UST)	Site and adjoining
State and tribal voluntary cleanup properties (VCP)	0.5
State and tribal Brownfield sites	0.5

4.1.1 Federal and State Database Search Results

The following is a summary of significant findings from the review of the database report:

4.1.1.1

Target Property

Pound Ridge Auto Body and/or Town and Country Auto Repair, Inc. were identified in the facility index system (FINDS), U.S. Aerometric Information Retrieval System (AIRS), Historical Auto Stations, NY UST, NY AST, NY LTANK, NY Liens, and NY Spills databases. Details for the inclusion of the Site in each of these databases are as follows:

- FINDS - The Site is listed in the FINDS database due to former petroleum service station operations.
- Historical Auto Stations - Site businesses listed in the Historical Auto Stations database are as follows:

Business Name	Dates Listed
Pound Ridge Auto Body	1999-2003, 2010
Town & Country Auto & Repair	2002, 2008, 2009
Texaco Service Station	2011, 2012

- NY UST - Nine USTs were identified for the Site in the EDR® NY UST Database review. The following table lists pertinent UST information contained in the database report:

UST ID	Capacity (gallons)	Contents	Install Date	Removal Date	Status
1	3000	Unknown	12/1/1969	"Prior to 1991"	Closed
2	3000	Diesel	12/1/1969	"Prior to 1991"	Closed
3	4000	Gasoline	12/1/1969	"Prior to 1991"	Closed
4	10000	Gasoline	12/1/1969	"Prior to 1991"	Closed
8	1000	Heating Oil	3/1/1995	8/13/2002	Closed In Place
100	4000	Gasoline	10/1/1988	8/12/2002	Removed
200	4000	Diesel	10/1/1988	8/12/2002	Removed
300	6000	Gasoline	10/1/1988	8/12/2002	Removed
400	6000	Gasoline	10/1/1988	8/12/2002	Removed

Notes: The LTANKS database did not list contents for UST #8. Former UST #8 contents were identified from other sources.

EDR lists the status for USTs 1 through 4 as "closed". It is likely that USTs 1 through 4 were removed in the fall of 1988 and were replaced with USTs 100 through 400 (installed in October 1988). UST removal and replacement was likely conducted in response to pending EPA regulations (Title 40 CFR Part 280) requiring upgrades to UST systems to

include leak, spill, overflow, and corrosion protection by December 1988. Due to the size of the Site, it is unlikely that all eight USTs would fit on the property; however, EES JV was unable to verify that USTs 1 through 4 were removed, or if they were abandoned in place and remain on-site.

EES JV observed the former fueling pad in the southern portion of the Site. A site plan drafted by Kulhanek & Plan, Land Surveyors, P.C. in June 2007 depicts a gravel driveway in the southeastern corner of the Site. This gravel driveway leads to the fueling pad and trends northeast up the Site driveway and was likely the former location of the USTs.

- NY AST - Three ASTs were identified for the Site in the EDR® NY AST Database review. The following table lists pertinent AST information:

AST ID	Capacity	Contents	Install Date	Removal Date	Status
001	275	Waste Oil	3/1/1995	Not Listed	Removed
002	275	#2 Fuel Oil	3/1/1995	--	In Service
003	275	#2 Fuel Oil	3/1/1995	--	In Service

During the Site reconnaissance, EES JV confirmed that AST No. 003 is still in use at Pound Ridge Auto Body. AST No. 002 remains onsite, adjacent to AST No. 003; however, AST No. 002 is no longer used.

- NY Leaking Storage Tank Incident Reports (LTANKS), Spill #0204941 - The Site was listed in the NY LTANK database when gasoline-related contamination was discovered in soils during the removal of four USTs in August 2002 (see Section 2.3.5). Spill #0204941 was assigned to the incident on September 9, 2002. According to NYSDEC records, the spill number was closed on November 12, 2002. The USTs removed during the event included:
 - UST No. 100: A 4,000-gallon double-walled gasoline UST.
 - UST No. 200: A 4,000-gallon double-walled diesel UST.
 - UST No. 300: A 6,000-gallon double-walled gasoline UST.
 - UST No. 400: A 6,000-gallon double-walled gasoline UST.

In addition, a 1,000-gallon heating oil tank (Tank #8) was abandoned in place by Town and Country personnel during the UST removal event.

Mr. DiFulvio provided a letter from the WCDOH dated November 12, 2002. This letter stated that based on the review of a “closure report” dated September 30, 2002, “results of the soil samples taken were satisfactory” and “the site requires no further action and NYSDEC Spill #0204941 will be formally closed”. The closure report is discussed in further detail in Section 2.3.5 above.

- NY LIENS, Spill #94-12600 - The NY LIENS database lists a \$484,416 lien against Town and Country Auto Repair placed in 1999. Spill #94-12600 is associated with this database entry; however, the NY LIENS database does not indicate whether this is an environmental lien. Interviews with Town officials and the Site owner identified an additional \$200,000 lien imposed on the property. Additional information provided by Mr. Richard Lyman, Town Supervisor, indicates that the \$484,416 lien was placed by the Town for failure to pay back taxes, and the \$200,000 lien was imposed by NYSDEC after completion of site assessment and remedial actions taken in 1995-1996 in response to Spill #9412600.

As discussed in Sections 2.3.1 and 2.3.2 of this report, Spill #9412600 is associated with the release of petroleum constituents that occurred at 66 and 77 Westchester Avenue, which contaminated a number of potable water supply wells in Scotts Corners. Gasoline constituents were first observed in Pound Ridge Cleaners’ well at 72 Westchester Avenue in July 1993. Groundwater sampling conducted later in 1994 detected contamination in several potable water supply wells servicing businesses along Westchester Avenue and homes along Trinity Lane, Lower Trinity Pass Road, and Trinity Pass Road. Subsurface investigations performed in July 1995 concluded that the principal source of contamination to these wells was a Shell service station located at 66 Westchester Avenue, but Town and Country Auto Repair was not ruled out as an additional source of contamination. According to NYSDEC records, this spill record has not been closed.

- NY Spills, Spill #9507568 – The Site is identified in the NY Spills database due to groundwater contamination identified in August 1995. Gasoline constituents including MtBE were detected in groundwater samples collected from the Site, and 6 inches of light

non-aqueous phase liquid (LNAPL) was measured in an on-site monitoring well (MW-3). Monitoring well installation and groundwater sampling in August 1995 was being conducted as part of the response to Spill #9412600. Details regarding assessment and remediation actions taken in response to this spill are provided in Sections 2.3.1 and 2.3.2 of this report.

According to a 1996 *Groundwater Quality and Remediation System Report* produced by Town and Country Auto Repair's consultant, the SVE/AS system installed in October 1995 improved groundwater conditions, and no measureable LNAPL was encountered in monitoring well MW-3 during an August 14, 1996 monitoring event. According to NYSDEC records, this spill was closed on March 27, 2013.

4.1.1.2 Adjoining Properties

Several adjoining properties were identified in databases reviewed by EDR®. Additional information is summarized below:

76 Westchester Avenue - This property is located south-southwest of the Site, across Westchester Avenue, and is listed in the NY LTANKS database due to a No. 2 fuel oil tank overflow that occurred in February 2002. Although specific tank details are not provided by EDR®, contaminated soil was discovered during tank removal efforts. Further remarks indicate that 36.66 tons of contaminated soil was removed, and the spill record was closed on March 5, 2002.

Pound Ridge Cleaners, 72 Westchester Avenue - This property is located south of the Site, across Westchester Avenue, and is listed in the RCRA Conditionally Exempt Small Quantity Generator (RCRA-CESQG), NY Manifest, US AIRS, Historical Drycleaners, NY Drycleaners, and NY State Hazardous Waste Site (SHWS) databases due to historical dry cleaning operations.

The NYSDEC website states this property was listed in the SHWS database for low levels of solvent contamination identified in a drinking water sample collected in November 1999. According to the website, a tap water sample collected in July 1993 from Pound Ridge Cleaners was found to contain low levels of tetrachloroethylene (PCE) and MtBE. PCE is a chlorinated solvent often associated with dry cleaning operations; however, MtBE is a gasoline additive and was attributed to Spill #9412600 (described above). Several times since July 1993, PCE was

detected at concentrations ranging between 1.3 ppb and 13 ppb in subsequent water samples. PCE was also detected at levels below the applicable soil cleanup objective in soil samples collected behind the dry cleaner. Toluene was also detected in septic tank and tap water samples at levels below the applicable standards.

74 Westchester Avenue – This property is located south of the Site, across Westchester Avenue, and is listed in the NY LTANK database due to a tank test failure in November 2000. The 1,000-gallon No. 2 fuel oil UST was retested in December 2000 and passed the retest, resulting in no further action at the property.

4.1.1.3 Sites Located Within the Search Radii

Sites identified in the database search that are not the target property (the Site) or direct abutters are identified in this section. Only databases with target properties listed within the ASTM-defined search radii are included in the following sections. EDR did not identify properties within the applicable search radii for the NPL/Delisted NPL, CERCLIS/CERCLIS NFRAP, RCRA CORRACTS, RCRA non-CORRACTS TSD, IC/EC Registries, ERNS, LF/SWF, VCP, and Brownfields databases.

Refer to the EDR® Radius Map Report provided in Appendix D for a complete listing of database search results.

RCRA Generators. The RCRA database includes selective information on sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Three conditionally exempt small quality generators (CESQG) were identified within 0.25 miles of the Site. These properties include:

- Pound Ridge Cleaners - 72 Westchester Avenue (southern abutter);
- Dynax Corporation - 79 Westchester Avenue (western abutter); and
- Value Clean Cleaners - 55 Westchester Avenue.

State Hazardous Waste Sites (SHWS). The SHWS records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with

sites where cleanup will be paid for by potentially responsible parties. The data comes from the NYSDEC's Inactive Hazardous waste Disposal Sites in New York State. One SHWS site (#56088 Pound Ridge Cleaners, 72 Westchester Avenue) was identified within a 0.5-mile radius of the Site, and is summarized in Section 4.1.1.2 above.

State and Tribal Leaking Tank (LTANKS) Database. The LTANKS database lists leaking storage tank incidents. This database includes both leaking USTs and ASTs, and inclusion on this list are due to tank test failures, tank failures, or tank overfills.

Twenty-four LTANKS sites were identified within 0.5 miles of the Site, including the Site. Of the 24 properties listed, 14 of the properties are at elevations similar to or above the Site. Properties located at lower elevations relative to the Site are inferred to be hydraulically cross- or downgradient from the Site, and are not likely to pose a threat to the environmental conditions at the Site. These properties are excluded from the list below. Additional information on LTANK sites located at similar or higher elevations than the Site are described below.

- 74 Westchester Avenue - Described in Section 4.1.1.2 above.
- 76 Westchester Avenue - Described in Section 4.1.1.2 above.
- New Media School House, 69 Westchester Avenue - Identified on the LTANK database for a potential tank overflow of No. 2 fuel oil on December 16, 1994. The database indicates that several target compounds were identified in soil analysis after the fuel oil tank was removed, and that the site was closed on February 18, 2005.
- 10 Trinity Pass Road - Identified on the LTANK database for a tank testing failure on August 12, 2008. The tank passed a retest once the tank fittings were repaired. The site was closed on September 17, 2008.
- 65 Westchester Avenue - Identified on the LTANK database for a tank testing failure on a No. 2 fuel oil tank on March 18, 2002. The database indicates that the tank was removed on April 5, 2002, and that no leak or contamination was evident during the tank removal. The site was closed on April 5, 2002.

- Scotts Corner Auto, Westchester Avenue - Identified on the LTANK database for a tank failure of a gasoline storage tank on April 1, 1988. According to the database report, the site was closed on November 6, 2004.
- Brunbaug Residence, 96 Trinity Pass Road - Identified on the LTANK database for a tank failure of a 550-gallon No. 2 fuel oil storage tank at a private dwelling on May 9, 2005. According to the database report, the site was closed on September 20, 2005.
- Healy Residence, 26 Trinity Pass Road - Identified on the LTANK database for a tank failure of a 275-gallon No. 2 fuel oil storage tank at a private dwelling on October 23, 2006. According to the database report, contamination soil was found, cleaned up, and the site was closed on October 23, 2006.
- 51 Trinity Pass - Identified on the LTANK database for a tank failure of a 550-gallon No. 2 fuel oil storage tank at a private dwelling on October 31, 2003. The dwelling had three different storage tanks, two of which required removal and/or proper abandonment prior to closing the Site. The site was closed on February 2, 2004.
- 8 Upper Shad Road - Identified on the LTANK database for a tank overflow at a private dwelling on January 18, 2001. According to the EDR report, the site was closed on the same day, January 18, 2001.
- Residence, 49 Woodland Road - Identified on the LTANK database for a tank testing failure on January 26, 2000. The tank passed a retest once the tank fittings were repaired. The site was closed on March 14, 2000.
- Hart Residence, 120 Barnegat Road - Identified on the LTANK database for a tank testing failure of a No. 2 fuel oil tank on June 1, 2000. The database indicates that the tank was excavated, cleaned, and abandoned in place, with no soil contamination identified. The site was closed on March 9, 2000.
- 205 Barnegat Road - Identified on the LTANK database for a tank failure for a No. 2 fuel oil storage tank at a private dwelling on March 29, 2002. According to the database report, contamination soil was found associated with a leaking underground storage tank. The

tank was removed along with 3 to 4 tons of soil, and the site was closed on September 11, 2002.

Due to the resolved status of these incidents, these records are unlikely to adversely impact environmental conditions at the Site.

State and Tribal Registered Storage Tank List. This database lists registered underground and aboveground storage tanks. EDR identified three adjoining properties as registered UST/AST properties.

- AC&S Excavation (10 Trinity Pass Road) - One UST in service, one UST closed in place, one AST in service.
- Pound Ridge Auto Care (66 Westchester Avenue) - One UST removed, one UST in service, one AST in service.
- Barnwell Associates (54-56 Westchester Avenue) - One UST removed.

When managed property and tested regularly, USTs and ASTs pose little threat to the environment. The tanks provided in the bullets above are not likely to pose a threat to environmental conditions at the Site.

NY Spills. The NY Spills database lists spills reported to NYSDEC and assigned a spill tracking number. The database includes spills active as of January 1, 1978, as well as spills occurring up to the most recent database update (February 15, 2016).

In addition to the NY Spills discussed for the Site and adjoining properties in Sections 4.1.1.1 and 4.1.1.2 of this report, three NY Spills sites were identified within 0.25 miles of the Site. The three NY Spills sites are summarized below.

- Sally & Joseph Siano, 70 Westchester Avenue - Identified in the NY Spills database for a leak associated with a No. 2 fuel oil tank ball valve on October 7, 1996. The spill was to concrete and was reportedly cleaned up. The spill was closed on October 7, 1996.

- Albano Appliance, 83 Westchester Avenue - Identified in the NY Spills database for the presence of contaminated soil discovered during removal of two USTs on March 22, 2011. According to EDR® the site was closed on June 1, 2011 after UST and soil cleanup.
- Pound Ridge Ambulance, 89 Westchester Avenue - Identified in the NY Spills database for soil contamination associated with the removal of a No. 2 fuel oil storage tank on April 14, 2011. According to the EDR® database report, one 550-gallon UST was removed along with 17.39 tons of petroleum-contaminated soil. The Site was closed on June 2, 2011.

All of these NY Spills sites have achieved a “closed” status. Therefore, they are unlikely to adversely impact environmental conditions at the Site.

4.1.2 Town of Pound Ridge Municipal Records

ESS JV acquired information from Town of Pound Ridge municipal offices during a visit on January 6, 2016, as well as through email correspondence and telephone interviews. Copies of municipal records gathered during the assessment are included in Appendix B. This section provides a summary of municipal records reviewed by EES JV for the Phase I ESA.

Assessor's Office - The Town Assessor's Office provided EES JV with copies of property files for the Site parcel. In addition, EES JV reviewed Assessor's Office files through the Town's website. Site ownership information derived from Assessor's Office files is presented in Section 2.2 above.

Building Department - EES JV was informed by the Building Department that records for the Site are incomplete because a large portion of the records were retained and then not returned by an attorney representing residents of the Town as a result of Spill #9412600. The Building Department was only able to provide records to EES JV dating back to 2002. Additionally, these records did not provide any pertinent information that was not already available through other sources (i.e. an incomplete 2002 petroleum bulk storage work permit and work summary, etc.).

Fire Prevention Bureau - EES JV visited the Pound Ridge Volunteer Fire Department on January 6, 2016 to request any storage tank, flammable storage, or other relevant environmental records. The Fire Prevention Bureau did not have any files for review.

Town Clerk's Office – The Town Clerk's office did not have any files for EES JV to review.

4.1.3 Other Sources Consulted

At the suggestion of Richard Lyman, EES JV contacted Conklin Services & Construction, Inc. (Conklin has since changed names and is now called Optima Environmental Services, Inc.). Mr. Lyman stated this contractor performed remediation work at the Site and surrounding areas in response to Spill #9412600, and may have reports or additional information for review. EES JV contacted Optima via telephone on January 6, 2016 to request any records they may have for the Site or the response to Spill #9412600. Optima responded via email on January 7, 2016 stating they could not find any reports in their system, and suggested EES JV contact the WCDOH.

EES JV contacted WCDOH to retrieve records pertaining to the Site and was directed to file a FOIL request. EES JV filed a FOIL request on January 14, 2016 and received notification that files were available for review in WCDOH's New Rochelle, New York office. EES JV traveled to the WCDOH office on February 12, 2016 to review these records (see Section 2.3).

4.2 Physical Setting Sources and Groundwater Flow Direction

The Site is located at 41.1908°N latitude and 73.5519°W longitude and is situated approximately 399 feet above mean sea level. The Site is generally flat. The Town provided a Site plan created by Kulhanek & Plan Land Surveyors, P.C that depicts the layout of the parcel and property boundaries. This Site plan is provided in Appendix B.

According to information provided by LTR in environmental reports prepared in 1995 in response to Spill #9412600, groundwater at the Site flows from east to west. However, the shape of the plume at 66 Westchester Avenue shown in these same documents suggests groundwater flow is from west to east. Judging by the topography of the Site, it is possible that the hydraulic gradient in the project area is nearly flat, and the pumping influence of water supply wells in the area creates localized variations in groundwater flow direction.

4.3 Historical Use Information on the Site

Sources dating back to 1892 helped EES JV determine the historical use of the Site. Historical use information was generated from interviews with Town officials, municipal file reviews, and the historical documents described in the following sections.

Businesses formerly operating on the Site included several gasoline fueling stations, including most recently a Texaco station. Records show that USTs were present from 1969 to 2002; however, a vintage photo on display at the Site depicts a Mobilgas gasoline station and repair garage with 1940s or 1950s vintage signs and gasoline dispensers. The most recent petroleum bulk storage application was filed in February 16, 1999. EES JV was unable to determine the exact timeframe the Site operated as a gasoline station.

4.3.1 Topographic Maps

EES JV reviewed historical topographic maps provided by EDR®. Maps included the 2013, 1971, 1960, 1951, and 1947 Pound Ridge quadrangle maps; and the 1899, 1893, and 1892 Stamford quadrangle maps. The topographic map report is included in Appendix E.

1892, 1893, 1899 – The Site and immediate vicinity are depicted as undeveloped. Westchester Avenue and Trinity Pass exist in a configuration comparable to current conditions. Scotts Corners is largely undeveloped.

1947 – The Site is unchanged from the 1899 depiction. New development in the general vicinity of Scotts Corners is evident in the form of a few new structures near the intersection of Westchester Avenue and Trinity Lake Road (referred to as Trinity Pass in later maps). Westchester Avenue is identified as Route 29.

1951 – The Site appears to have been further developed and new structures are evident in the immediate vicinity of the Site and Scotts Corners.

1960, 1971 – The Site is still developed as depicted on previous maps. Development in the immediate vicinity of the Site includes larger buildings. Trinity Lane is now shown to the southeast of the Site on the opposite side of Westchester Avenue as a dead-end road.

2013 – Development is not illustrated on the map. Trinity Lane to the southeast now connects to Lower Trinity Pass.

4.3.2 Sanborn® Fire Insurance Maps

EES JV reviewed a Sanborn® Fire Insurance map provided by EDR® dated 1942. A copy of the Sanborn® map is included in Appendix E. Minimal Sanborn® Map coverage of the Site and vicinity was available for review. In the 1942 map, the Site is depicted as undeveloped, as is the immediate vicinity, with the property listed as affiliated with Geo. Scott.

4.3.3 Aerial Photographs

EES JV reviewed aerial photographs provided by EDR® dated 1934, 1949, 1954, 1960, 1963, 1971, 1974, 1989, 1992, 2005, 2006, 2008, 2009, 2010, 2011, and 2012. Copies of these aerial photographs are included in Appendix E.

1934 - The aerial photograph depicts the Site undeveloped but cleared in spots. Minimal development in the vicinity of Scotts Corners is apparent, and the development observed is consistent with cleared fields for agricultural use.

1949 - The Site remains undeveloped, but development in the Site vicinity has increased on the north and south sides of Westchester Avenue. The property currently identified as the Pound Ridge Cleaners site appears to have been developed to the south-southeast across Westchester Avenue. Development of the property currently identified as the Pound Ridge Auto Care – Sunoco gas station on the corner of Westchester Avenue and Trinity Pass is apparent, but it does not appear to be consistent with the present day configuration.

1954 - The Site appears as developed with a building apparent in the same shape and size as the present day. Additional properties in the vicinity of the Site appear to be expanding or developing consistent with commercial use.

1960, 1963 - The Site configuration is generally the same. Development to the north and south of Westchester Avenue in the vicinity of the Site has increased to the general footprint of the present.

1971 - The Site configuration is generally the same. Development in the vicinity of the Site is consistent with previous photos. Development of the property currently identified as the Pound Ridge Auto Care – Sunoco gas station on the corner of Westchester Avenue and Trinity Pass appears to be more consistent with the present day configuration.

1974 - The Site configuration is generally the same. Development in the vicinity of the Site is consistent with previous photos. A large multi-building facility has been constructed on the north side of Westchester Avenue to the east of Trinity Pass, consistent with the present-day Trinity Corners Shopping Center.

1989 - The Site configuration is generally the same. Development in the vicinity of the Site is consistent with previous photos. A building is apparent on the north side of Westchester Avenue to the east of Trinity Pass, consistent with the present-day US Post Office location.

1992, 2005, 2006, 2008, 2009, 2010, 2011, 2012 - The Site configuration is generally the same. Development in the vicinity of the Site is consistent with previous photos.

4.3.4 City Directories

EES JV reviewed City directories provided by EDR® for Westchester Avenue and Trinity Pass Road dated 1975, 1980, 1992, 1999, 2003, 2008, and 2013. Copies of these city directories are included in Appendix E.

1975, 1980, 1992 - The City Directories report did not identify the Site or other properties in the vicinity with directory listings correlating to a physical address. Listings provided for properties in the Site vicinity are consistent with historical uses for commercial and residential purposes as indicated by other resources reviewed.

1995, 1999 - The Site is listed as Pound Ridge Auto Body. The property at 72 Westchester Avenue is identified as Strap Hinge (antique shop).

2003 - The Site is listed as Byron Fuentes/Pound Ridge Auto Body/Town & Country Auto Repair. The property at 66 Westchester Avenue is listed as Pound Ridge Auto Care Inc. The property at

72 Westchester Avenue is listed as Erica Dignan/Pound Ridge Cleaners/Strap Hinge/Teresa Vena.

2008 - The Site is listed as Adeldo Cruz/Town & Country Auto & Repair Inc. The property at 66 Westchester Avenue is listed as Occupant Unknown/Pound Ridge Auto Care Inc. The property at 72 Westchester Avenue is listed as Occupant Unknown/Penny Whistle Toys/Plum Plums LLC/Strap Hinge/Taegeuck INC.

2013 - The Site is listed as Adeldo Cruz/Pound Ridge Auto Body/Texaco. The property at 72 Westchester Avenue is listed as CJLK Corp/Occupant Unknown/Plum Plums LLC/Pound Ridge Cleaners/Silhouette.

4.4 Vapor Encroachment Screening

As part of the ASTM 1527-13 standard, EES JV completed a vapor encroachment screening (VES) for the Site. The screening was prepared in general compliance with ASTM E 2600-10, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*.

A vapor encroachment condition (VEC) is *“the presence or likely presence of chemical(s) of concern (COC) vapors in the soil or groundwater of the subject property caused by the release of vapors from contaminated soil or groundwater either on or near the subject property. A VEC is a potential exposure pathway, specifically to building occupants, whereby volatile organic contamination present in soil and groundwater may partition into the vapor phase and migrate into soil gas and indoor air.”*

The findings of the VES are as follows:

- Spill #9412600 refers to the release of gasoline contamination to soil and groundwater that impacted potable water supply wells in Scotts Corners. According to records reviewed by EES JV, both the Site and 66 Westchester Avenue were the sources of contamination to these wells. The boundaries of petroleum contamination were last delineated in 1995, and at the time, the groundwater plume emanating from the Site extended beyond the

property boundary. The current extent of this groundwater plume is unknown and the spill is still open.

- Spill #9507568 refers to the detection of 6 inches of free product in a monitoring well located on the Site. Subsequent remedial efforts reportedly improved the quality of groundwater and reduced the amount of free product in the well; however, the system was terminated at an unknown time. The concentration of petroleum constituents in Site groundwater is currently unknown.
- Dry cleaning operations at 72 Westchester Avenue have resulted in this property being identified as a SHWS. Low levels of PCE and toluene have been detected in soil and groundwater samples collected from the property. Given this property's proximity to the Site, solvent contamination may have migrated onto the Site and impacted the quality of indoor air at the Site.

EES JV has concluded that a VEC likely exists for the Site. This VEC is based on the known presence of volatile organic contamination in soils and groundwater and historical operations at the Site and in the surrounding area. These concerns are noted as RECs.

5.0 SITE RECONNAISSANCE

EES JV personnel performed subject Site reconnaissance on January 6, 2016. Details of the site reconnaissance are provided in the following sections.

5.1 Methodology and Limiting Conditions

Mr. Evan Rudomen and Ms. Allison Goldberg of EES JV visited the Site to observe current property conditions. Mr. Richard Lyman (Town Supervisor) accompanied EES JV during the site visit to allow access to the property and answer user-related questions. Mr. John DiFulvio (Site owner and operator of Town and Country Auto Repair) and Mr. Thomas H. Dubay (operator of Pound Ridge Auto Body) were also present during the Site reconnaissance to grant access and answer owner and occupant related questions. General site features are shown on Figure 2. Site photographs taken by EES JV during the reconnaissance are provided in Appendix F.

5.2 General Site Setting

The Site is in a mixed-use area of Pound Ridge, New York known as Scotts Corners. The surrounding area contains residential properties to the north and west, commercial and residential properties to the east and south.

5.3 Exterior Observations

The following observations were made of the exterior portions of the Site:

- The Site is bounded to the south by Westchester Avenue.
- The former pump island is located on an asphalt parking lot between the entrance of Town and Country Auto Repair and Westchester Avenue.
- A groundwater monitoring well, believed to be MW-3, is located to the south of the fueling station. The well was observed to be filled with soil and is not useable for gauging or sampling.
- A partial wooden fence runs along the western border of the Site.

- EES JV observed two rectangular concrete foundations along the west wall of the building that suggest some structure had previously existed at this location.
- EES JV observed cracking on the west façade of the building.
- Tires, gasoline containers, and lawn tools are present along the west side of the building.
- A private well is present adjacent to the southwestern corner of the building.
- A septic system tank is located along the northeastern wall of the building.
- A dumpster is located in the northeastern portion of the Site.
- EES JV observed a concrete-sealed dry well in the parking lot to the east of Pound Ridge Auto Body.
- Fill and vent pipes, and associated labels, for the in-service and out-of-service 275-gallon ASTs are present on the northwestern exterior wall of the building.
- The parking lot surrounding the building is generally in good condition.
- EES JV observed a concrete-sealed dry well in the parking lot to the east of Pound Ridge Auto Body. The dry well was reportedly sealed on June 10, 2002. It is unknown whether environmental investigations were conducted prior to sealing the dry well and associated floor drains. A sink and floor drains in the garage bays of Town and Country Repair Shop and Pound Ridge Auto Body formerly channeled runoff into the dry well.

5.4 Interior Observations

EES JV performed an inspection of the interior portions of the on-site building. The building is comprised of Pound Ridge Auto Body and Town and Country Repair Shop on the ground level, and a vacant apartment on the second floor.

5.4.1 Pound Ridge Auto Body

Pound Ridge Auto Body is located in the northern portion of the on-site building. The shop can be entered through a door on the northeastern side of the building. The northwest portion of the body shop consists of a small office space and a large garage bay. Vehicle access is possible through one garage bay door on the east side of the building.

EES JV observed the following in the interior portions of the Pound Ridge Auto Body portion of the on-site building:

- 5-gallon buckets of solvents and de minimis chemical cleaners, paints, and aerosols used for car painting.
- Hazardous materials are stored in a storage cabinet designed to store flammable liquids. The hazardous materials are containerized inside the cabinet.
- According to Thomas Dubay, operator of Pound Ridge Auto Body, the sealed floor drain observed in the garage was connected to a dry well in the parking lot located east of the auto body entrance.
- A utility room located in the northwestern corner of the garage stores the two 275-gallon ASTs used for No. 2 fuel oil storage. AST No. 003 is still in service while AST No. 002 is inactive. EES JV was unable to observe the floor beneath the ASTs or the condition of the northern and eastern sides of the ASTs due to their position and orientation within the utility room.
- A puddle of liquid collected in a low spot on the floor. EES JV believed the liquid to be water. The source of the water is unknown, but is likely condensate from the boiler.
- A parts cleaner used to clean the spray paint gun is located in the garage bay of Pound Ridge Auto Body. The waste generated from this tool is collected in a 5-gallon bucket and transported and disposed of by Safety Kleen.

5.4.2 Vacant Apartment

The door adjacent to the Pound Ridge Auto Body is labeled “77A”, and opens to a stairwell that leads to the apartment on the second floor. The apartment has been vacant for approximately 10 years.

EES JV observed the following in the apartment unit:

- The apartment is comprised of three bedrooms, a living room with a fireplace, a kitchen, and a bathroom.
- The apartment is in a state of disrepair. The walls, ceiling, and flooring appear to have suffered water damage and staining is apparent throughout. Paint is chipping from the ceiling and walls. Mold was observed on the back wall of the apartment, and parts of the ceiling have collapsed in the kitchen.
- All rooms were formerly heated from an old boiler that is no longer in use. AST 002 was used to store the old fuel oil and is currently inactive. The space is currently unheated.
- A deck is accessed through a door in the southern portion of the apartment. This deck sits above the southern portion of Town and Country Auto Repair portion of the building.

A bathroom used by personnel of Pound Ridge Auto Body is present to the south of the door that leads to the apartment on the east side of the building.

5.4.3 Town and Country Repair Shop

The Town and Country Repair Shop is located in the southern portion of the building. It is comprised of a two-bay garage with a parts/equipment storage and work area in the western portion and an office, supply storage area, and bathroom in the eastern portion. EES JV observed the following in Town and Country Repair Shop:

- Two concrete-sealed floor drains in the repair garage bay. These drains reportedly formerly discharged to the dry well in the parking lot located east of the auto body entrance.

- The concrete floor is in good condition with only minor cracks.
- One hydraulic lift is located in the garage.
- EES JV observed tires, 5-gallon buckets of oils, lubricants, and waste oil as well as de minimis containers of paints, cleaning products, and lubricants throughout the building. John DiFulvio stated the waste oil generated is stored in 5-gallon buckets and donated to a friend to be burned in a waste oil furnace.
- EES JV did not enter or see inside the attic space but was informed that it is used for storage.

6.0 INTERVIEWS

Interviews performed during the Phase I ESA are summarized below.

6.1 Interview with Owner

John DiFulvio represented the “owner”. Details of the Owner interview are included throughout the report; however a summary of the interview is as follows:

- Past use of the Site included a gasoline station.
- The property is currently used as an automobile repair facility.
- A dry cleaner and gas station neighbor the Site to the south.
- Spill #9412600 resulted in the implementation of a SVE remediation system in late 1990s. The system is no longer present on Site and it remains uncertain as to when the system was decommissioned and removed.
- Abandoned floor drains are sealed with concrete.
- Two ASTs are currently on-Site.
- Mr. DiFulvio provided EES JV with documentation indicating four historical USTs (No. 100, 200, 300, 400) have been removed and one UST heating oil tank (No. 8) was abandoned onsite.
- Waste oil is transported offsite.

The Owner Questionnaire is included as Appendix C.

6.2 Interview with Site Manager

The property owner is the site manager.

6.3 Interviews with Occupants

Details of interviews conducted with Thomas H. Dubay, of Pound Ridge Auto Body, on January 6, 2016 are included throughout the report. A summary of the interview is as follows:

- Concrete-sealed drains formerly channeled into a dry well in the parking lot east of Pound Ridge Auto Body.
- Hazardous wastes generated by Pound Ridge Auto Body are collected in 5-gallon buckets which are ultimately transported and properly disposed of by Safety-Kleen.

6.4 Interviews with Local Government Officials

The results of interviews and research at local government offices are discussed in Section 4.1.2.

6.5 Interviews with Others

ESS JV acquired information from the WCDOH in New Rochelle, New York during a visit on February 12, 2016. A copy of the department records gathered during the assessment are included in Appendix B.

7.0 FINDINGS

EES JV presents the following findings of the Phase I ESA completed for the Site located at 77 Westchester Avenue in Pound Ridge, New York:

- The Site is identified by the Town as parcel number 9454-9. The Site is approximately 0.34 acres in size, located in an area that is currently zoned PB-A, which is reserved for “planned business” occupancy.
- The Site is developed with a 4,864-square foot, two-story, mixed-use building that is currently occupied by Pound Ridge Auto Body and Town and Country Auto Repair Shop on the first story, and a vacant apartment on the second story.
- The Site was formerly used as a gasoline filling station. Records suggest that petroleum bulk storage occurred on the Site from at least 1969 until 2002. Nine USTs and three ASTs were reported to have been present at the Site during its operational history. All nine USTs have reportedly been removed or abandoned. Two of the ASTs remain in service, although according to the property owner, only one of the ASTs is still in use.
- The Site was identified in multiple environmental databases reviewed by EDR®, including the following:
 - Town and Country Auto Repair, Inc. - The Site is listed on the FINDS, NY UST, NY AST, NY LTANK, NY LIENS, and NY Spills databases. The Site is listed in FINDS due to its former operations as a petroleum service station.
 - Pound Ridge Auto Body - The Site is listed in the FINDS, U.S. AIRS, Historical Auto Stations, FINDS, and Manifest databases. The Site is listed in FINDS due to its former operations as a petroleum service station.
- The Site was the source of several spill records on file with NYSDEC:
 - Spill #9412600 was recorded in December 1994. This spill number is associated with a release of petroleum constituents (gasoline) that impacted numerous potable water

supply wells in Scotts Corners, first discovered in 1993. Subsurface investigations performed by NYSDEC in 1995 attributed groundwater contamination to the Shell service station operating at 66 Westchester Avenue, but did not rule out potential contributions from the Site (operating at the time as a Texaco service station). The extent of groundwater contamination emanating from the Site was determined to originate from the pump and UST area and extend approximately 30 feet off site to the south. Remedial actions were taken to reduce concentrations of VOCs in soil and groundwater. However, EES JV did not encounter information regarding the length of time that this system was in operation, or whether contaminant levels were reduced to levels appropriate for unrestricted use. According to NYSDEC records, this spill is still open.

- Spill #9507568 was recorded in September 1995 after the measurement of 6 inches of free product in a monitoring well located on the Site. Subsequent remedial efforts reportedly improved the quality of groundwater and reduced the amount of free product in the well. This spill was closed on March 27, 2013, however the concentration of petroleum constituents in Site groundwater is currently unknown.
- Spill #0204941 was recorded in August 2002 after the detection of gasoline contamination in soils during UST removal activities. Contaminated soil was removed from the Site for off-site disposal, and cleanup confirmatory soil samples collected from the tank excavation verified the removal of impacted soils. This spill number was closed on November 12, 2002.
- The NY LIENS database lists a \$484,416 lien against Town and Country Auto Repair. Spill #94-12600 is associated with this database entry; however, the NY LIENS database does not confirm that this lien is an environmental lien. Based on information provided by Mr. Richard Lyman, Town Supervisor, the \$484,416 lien was placed by the Town for failure to pay taxes, and an additional \$200,000 lien was imposed on the property by NYSDEC after completion of environmental assessment activities in the mid-1990s to address petroleum contamination in private water supply wells throughout Scotts Corners.
- Businesses in the vicinity of the Site include a dry cleaner and gasoline station. Pound Ridge Cleaners is located south across Westchester Avenue, and is listed in the RCRA

Conditionally Exempt Small Quantity Generator (RCRA-CESQG), NY Manifest, AIRS, Historical Drycleaners, NY Drycleaners, and NY State Hazardous Waste Site (SHWS). The gasoline station at 66 Westchester Avenue (Shell) that was the source of Spill #9412600 is also located across Westchester Avenue.

- Recent Site operations include the use and storage of oils, solvents, and paints. EES JV observed several metal pails, 5-gallon buckets, and other chemical containers throughout building, some of which did not have lids.
- EES JV observed a concrete-sealed dry well in the parking lot to the east of Pound Ridge Auto Body. According to the Site owner, floor drains in the garage bays of Town and Country Repair Shop and Pound Ridge Auto Body formerly channeled runoff into the dry well. In correspondence between NYSDEC and the property owner in 2002, it was noted that a sink used to clean parts with degreasers was also connected to the dry well. The dry well was reportedly sealed on June 10, 2002. It is unknown whether environmental investigations were conducted prior to sealing the dry well.
- EES JV evaluated the potential for contaminant migration in the vapor phase, in accordance with the ASTM E1527-13 standard. EES JV concludes that a VEC is likely at the Site due to the release of vapors from contaminated soil and/or groundwater at the Site. The migration of vapors through the subsurface is a concern since previous environmental investigations have identified VOC contamination in environmental media.

8.0 OPINION

Based on review of the documentation available for this Phase I ESA, and the observations made during an inspection of the Site, it is the opinion of the Environmental Professionals who prepared this assessment that the following RECs exist on the Site:

8.1 Recognized Environmental Conditions

REC #1 – Spill #9412600/#9507568: Environmental sampling conducted in 1994 revealed contamination in several potable water supply wells in the Scotts Corners section of Pound Ridge, specifically in wells serving businesses on Westchester Avenue and homes located on Trinity Lane, Lower Trinity Pass Road, and Trinity Pass Road. This environmental sampling was prompted when petroleum contamination was detected during 1993 in a groundwater sample collected from the Pound Ridge Cleaners' well located at 72 Westchester Avenue. Subsequent to the 1994 groundwater sampling event, NYSDEC assigned Spill #9412600 to the release.

In 1995, NYSDEC contracted LTR to investigate gasoline station operations at 66 and 77 Westchester Avenue (Shell and Texaco gas stations, respectively). The objective of the investigation was to determine the potential source(s) of contamination impacting local drinking water wells. LTR's investigation included the installation of three overburden monitoring wells, two bedrock monitoring wells, and 33 soil borings on the Site. LTR also concurrently investigated the Shell station at 66 Westchester Avenue. Soil and groundwater samples were analyzed for the presence of VOCs.

BTEX compounds and MtBE were detected in soil and groundwater (overburden and bedrock) samples collected from both of the gasoline station properties. LTR concluded that the Shell station "appears to be the principle [*sic*] contributor" of groundwater contamination to potable wells in Scotts Corners, however the Site was not ruled out as a potential contributor to contamination in potable water supply wells. A \$200,000 lien was placed against the property by NYSDEC to cover site assessment and remedial actions conducted in response to Spill #9412600.

In September 1995, additional environmental investigations identified 6 inches of free product in a monitoring well located on the Site. NYSDEC assigned Spill #9507568 to this release. Town and Country Auto Repair contracted LTR to address Site contamination. LTR designed an SVE/AS system to remediate petroleum contamination in Site soil and groundwater. The SVE

and AS systems commenced operation in May and July 1996, respectively. In a September 1996 quarterly monitoring report, LTR concluded (based on sampling data) that groundwater quality had improved at the Site, primarily as a result the remediation system in place. The remediation system is no longer operating and its components were not observed during a 2016 site reconnaissance. Spill #9507568 was closed on March 27, 2013, however the concentration of petroleum constituents in Site groundwater is currently unknown.

Although Site contamination levels have been reduced, Spill #9412600 remains active for the Site and surrounding area. There is no documentation that contaminant levels have been reduced to levels suitable for unrestricted use or unlimited exposure.

REC #2 – On-Site Dry Well: EES JV observed a concrete-sealed dry well in the parking lot to the east of Pound Ridge Auto Body (Figure 2). According to the Site owner, floor drains in the garage bays of Town and Country Repair Shop and Pound Ridge Auto Body formerly channeled runoff into to the dry well. In correspondence between NYSDEC and the property owner in 2002, it was noted that a sink used to clean parts with degreasers was also connected to the dry well. The sink and associated piping were reportedly removed on June 10, 2002. In addition, the floor drains were reportedly sealed with concrete and the dry well abandoned on June 10, 2002. It is unknown whether environmental investigations were conducted prior to abandoning the sink, floor drains, and dry well. The illicit discharge of liquids through the sink and floor drains into the dry well may have resulted in a release of contaminants to the environment.

HREC – Spill #020451: In August 2002, IDC removed three gasoline USTs and one diesel UST associated with former fueling station operations from the Site. During UST removal, Town and Country Auto Repair personnel “legally abandoned” one 1,000-gallon fuel oil UST. This fuel oil UST was abandoned in place because it is located in the rear garage bay and could not be removed without compromising the building.

USTs were reported to be in “fair condition” with “pitting and corrosion present”. IDC discovered gasoline contamination in the tank graves due to UST failure and NYSDEC Spill #020451 was assigned to the release. A total of 176.01 tons of gasoline-contaminated soil was removed and disposed of at TPS Technologies, Inc., in New Windsor, New York. Confirmatory soil samples collected from the bottom of the excavation indicated that contaminated soil had been removed.

IDC observed an oily sheen on groundwater entering the tank excavation. IDC recommended groundwater sampling to determine if groundwater was impacted; however, reviewed reports do not indicate that groundwater monitoring was conducted. Spill #020451 was closed on November 12, 2002.

8.2 Recommendations

EES JV recommends Phase II investigations, including environmental sampling, to investigate the RECs identified in this Phase I report, specifically:

- Soil sampling (and if contamination is detected, monitoring well installation and groundwater sampling) in areas of suspected residual contamination to determine whether gasoline contamination is present above NYSDEC Soil Cleanup Objectives (SCOs). Areas targeted for investigation should include the former petroleum UST locations, the gasoline dispenser island, and the area downgradient (south) of the dispenser island previously identified within the extent of the gasoline plume associated with Spill #9412600. Soil and groundwater samples collected to address this REC should be analyzed for the presence of VOCs and petroleum constituents (both gasoline and diesel ranges).
- Soil sampling (and if contamination is detected, monitoring well installation and groundwater sampling) in the vicinity of the former dry well adjacent to Pound Ridge Auto Body, including along the length of underground pipe between floor drains and the sink that formerly discharged to the dry well. Soil and groundwater samples collected to address this REC should be analyzed for the presence of VOCs, polycyclic aromatic hydrocarbons (PAHs), petroleum constituents, polychlorinated biphenyls (PCBs), and heavy metals.
- Vapor intrusion screening in the on-site building to determine whether residual soil and groundwater contamination has the potential to impact indoor air quality.

9.0 CONCLUSIONS

In accordance with ASTM Practice E 1527-13 requirements, the Environmental Professionals that prepared this Phase I ESA provide the following Statement of Conclusion:

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 of the site located at 77 Westchester Avenue in Pound Ridge, New York. Any exceptions to, or deletions from, this practice are described in Section 2.4 and Section 11.0 of this report. This assessment has revealed evidence of historical or current recognized environmental conditions in connection with historical use of the property, as well as current conditions at the property.

10.0 DEVIATIONS

No substantive deviations from ASTM E 1527-13 were encountered during performance of this Phase I ESA. Any deviations from ASTM E 1527 are unlikely to significantly affect the findings and conclusions presented herein, unless otherwise noted below or in the report text above.

Limitations of this Phase I ESA are discussed in Appendix A.

11.0 ADDITIONAL SERVICES

Additional Services are assessments, recommendations, or other details beyond the scope of ASTM Practice E 1527-13. No additional services were performed.

13.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

This section presents the qualifications of the Environmental Professionals that performed the assessment of the Site. The following attestations are presented to satisfy the requirements of the All Appropriate Inquiries (AAI) Rule (40 CFR Part 312):

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of this part. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

A copy of the Checklist for Phase I Site Assessments Conducted using EPA Brownfields Assessment Grant Funds is provided in Appendix G of this report. This form will be filled out and signed by the grantee upon their review of this document, and included in the final version of this report.

Allie Goldberg
Staff Engineer

Over 1 year of experience as an environmental professional:

- Performing ASTM Phase I and Phase II property investigations and hazardous material surveys.
- Conducting site investigations and remediation activities at sites contaminated with petroleum or hazardous materials throughout the Northeast United States.
- Performing field investigations, providing contractor management, coordinating environmental projects, preparing reports and interfacing with Federal, State and local regulatory agencies.

Evan Rudomen

Staff Scientist

Over 2 years of experience as an environmental professional:

- Performing ASTM Phase I and Phase II property investigations and hazardous material surveys.
- Conducting hazardous materials surveys (asbestos, regulated materials), as well as conducting oversight of lead, asbestos, and hazardous materials inspections.
- Conducting site investigations and remediation activities at sites contaminated with petroleum or hazardous materials throughout the Northeast United States.
- Performing field investigations, providing contractor management, coordinating environmental projects, preparing reports and interfacing with Federal, State and local regulatory agencies.
- Performing operation and maintenance for groundwater extraction and remediation systems.

Jeffrey Brunelle

Project Manager

Over 15 years of experience as an environmental professional:

- Performing ASTM Phase I and Phase II property investigations and hazardous material surveys.
- Conducting hazardous materials surveys (asbestos, regulated materials), as well as conducting oversight of lead, asbestos, and hazardous materials inspection and abatement contractors.
- Conducting site investigations and remediation activities at sites contaminated with petroleum or hazardous materials throughout the Northeast United States.
- Performing field investigations, providing contractor management, coordinating environmental projects, preparing reports and interfacing with Federal, State and local regulatory agencies.
- Providing underground and aboveground storage tank removal, contaminated soil management, active and chemical soil and groundwater remediation, and budget tracking.

- Supervising installations of groundwater and product recovery wells, soil venting systems and groundwater remediation systems.

Stephen Vetere, PE, LSP, LEP

Project Manager

- Over 16 years of experience in providing a variety of environmental engineering services throughout the Northeast United States including site assessment, remediation, long-term monitoring, and five-year reviews.
- Manages and performs site assessments, remedial investigations, risk assessments, and develops remedial action plans for sites regulated under CERCLA and state programs as well as Brownfield properties.
- Designs and manages a variety of site remediation programs including contaminated soil excavation, groundwater recovery and treatment systems, *in situ* bioremediation systems, and enhanced natural attenuation remedial systems.
- Manages long-term monitoring programs at landfills and other closed facilities.

APPENDIX A - LIMITATIONS

- 1) This Environmental Site Assessment was performed in accordance with generally accepted practices of other consultants undertaking similar assessments at the same time and in the same geographical area. The results of this assessment are based on our professional judgment and are not scientific certainties. Specifically, Engineering and Environmental Solutions Joint Venture (EES JV) does not and cannot represent that the site contains no hazardous wastes or other latent conditions beyond those observed during this preliminary assessment. No other warranty, express or implied, is made.
- 2) The observations and conclusions presented in this report were made solely on the basis of conditions described thereon and not on scientific tasks or procedures beyond the scope of described services or the budgetary and time constraints imposed by the client. The work described in this report was performed in general accordance with the terms and conditions described in Work Assignment No. 001-SION-0200, Amendment 19 dated November 24, 2015. No other warranty, express or implied, is made.
- 3) Observations were made of the site as indicated in this report. Where access to portions of the site was unavailable or limited, EES JV renders no opinion as to the presence of hazardous wastes or the presence of indirect evidence of hazardous wastes in those portions of the site.
- 4) No property boundary, site feature, or topographic surveys of the site were performed by EES JV.
- 5) Our services did not include assessments for the presence of pesticides, herbicides, urea-formaldehyde foam insulation (UFFI), or lead in drinking water at the site. In addition, no air quality monitoring or chemical analyses of soil, surface water, or groundwater were performed as part of this assessment. The site was not assessed for compliance with the Clean Air Act. Our services did not include an assessment for typical non-friable asbestos-containing materials such as floor tiles, exterior siding, and roofing materials.
- 6) The purpose of this screen was to preliminarily screen the physical characteristics of the subject site with respect to the presence of hazardous wastes in the environment within the context of ASTM E 1527-13, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process". No attempt was made to check the compliance of present or past owners of the site with federal, state, or local laws.
- 7) This assessment has been prepared for the exclusive use of The Town of Pound Ridge solely for use in an environmental evaluation of the site. Reliance by others on the information and opinions contained herein is strictly prohibited without prior written consent of EES JV.
- 8) EES JV met with the Town of Pound Ridge review pertinent files, permits, or documentation pertaining to the Site and adjoining areas. The Town had minimal files to review. Many files were acquired by an attorney after a petroleum spill at 60-80 Westchester Avenue and have not since been returned.
- 9) EES JV did not enter the crawl space in Town and Country Auto Repair.

Dear John,

Please find enclosed tank test results from Town & Country Motors located at 1 Westchester Ave. in Pound Ridge, NY.

We notified the spill hotline (spill #8800858). I thought you might like a copy of the results.

As ever, if there are any questions concerning this location, please feel free to contact me anytime.

Very truly yours,

Smith C. Lippert Jr.

Re: Petroleum Spill No. 94-12600
PBS No. 3-449431
Town & Country Auto Repair
Westchester Ave.
Pound Ridge Westchester County

Dear Mr. DiFulvio:

As you are aware, the Department of Environmental Conservation (DEC) has been investigating a gasoline contamination problem involving private wells in Scott's Corners. Over the past few months, groundwater monitoring wells have been installed in the vicinity of your station. The field data indicates that at least one well near your pump island contains several inches of product. Lower levels of dissolved groundwater contamination exists in the surrounding area. Product recovery and groundwater remediation are necessary at your station. This Department considers you responsible for contamination in the vicinity of your station.

To date, the field investigation work has been funded by DEC. The purpose of this letter is to provide you the opportunity to assume responsibility for the installation of the remediation system. Should you decline, DEC will authorize a state contractor to perform the required remediation.

At the completion of the project, the State of New York will take legal action to recover all costs associated with this project.

Please contact me upon receipt of this letter so a meeting can be arranged to discuss your plans.

Very truly yours,

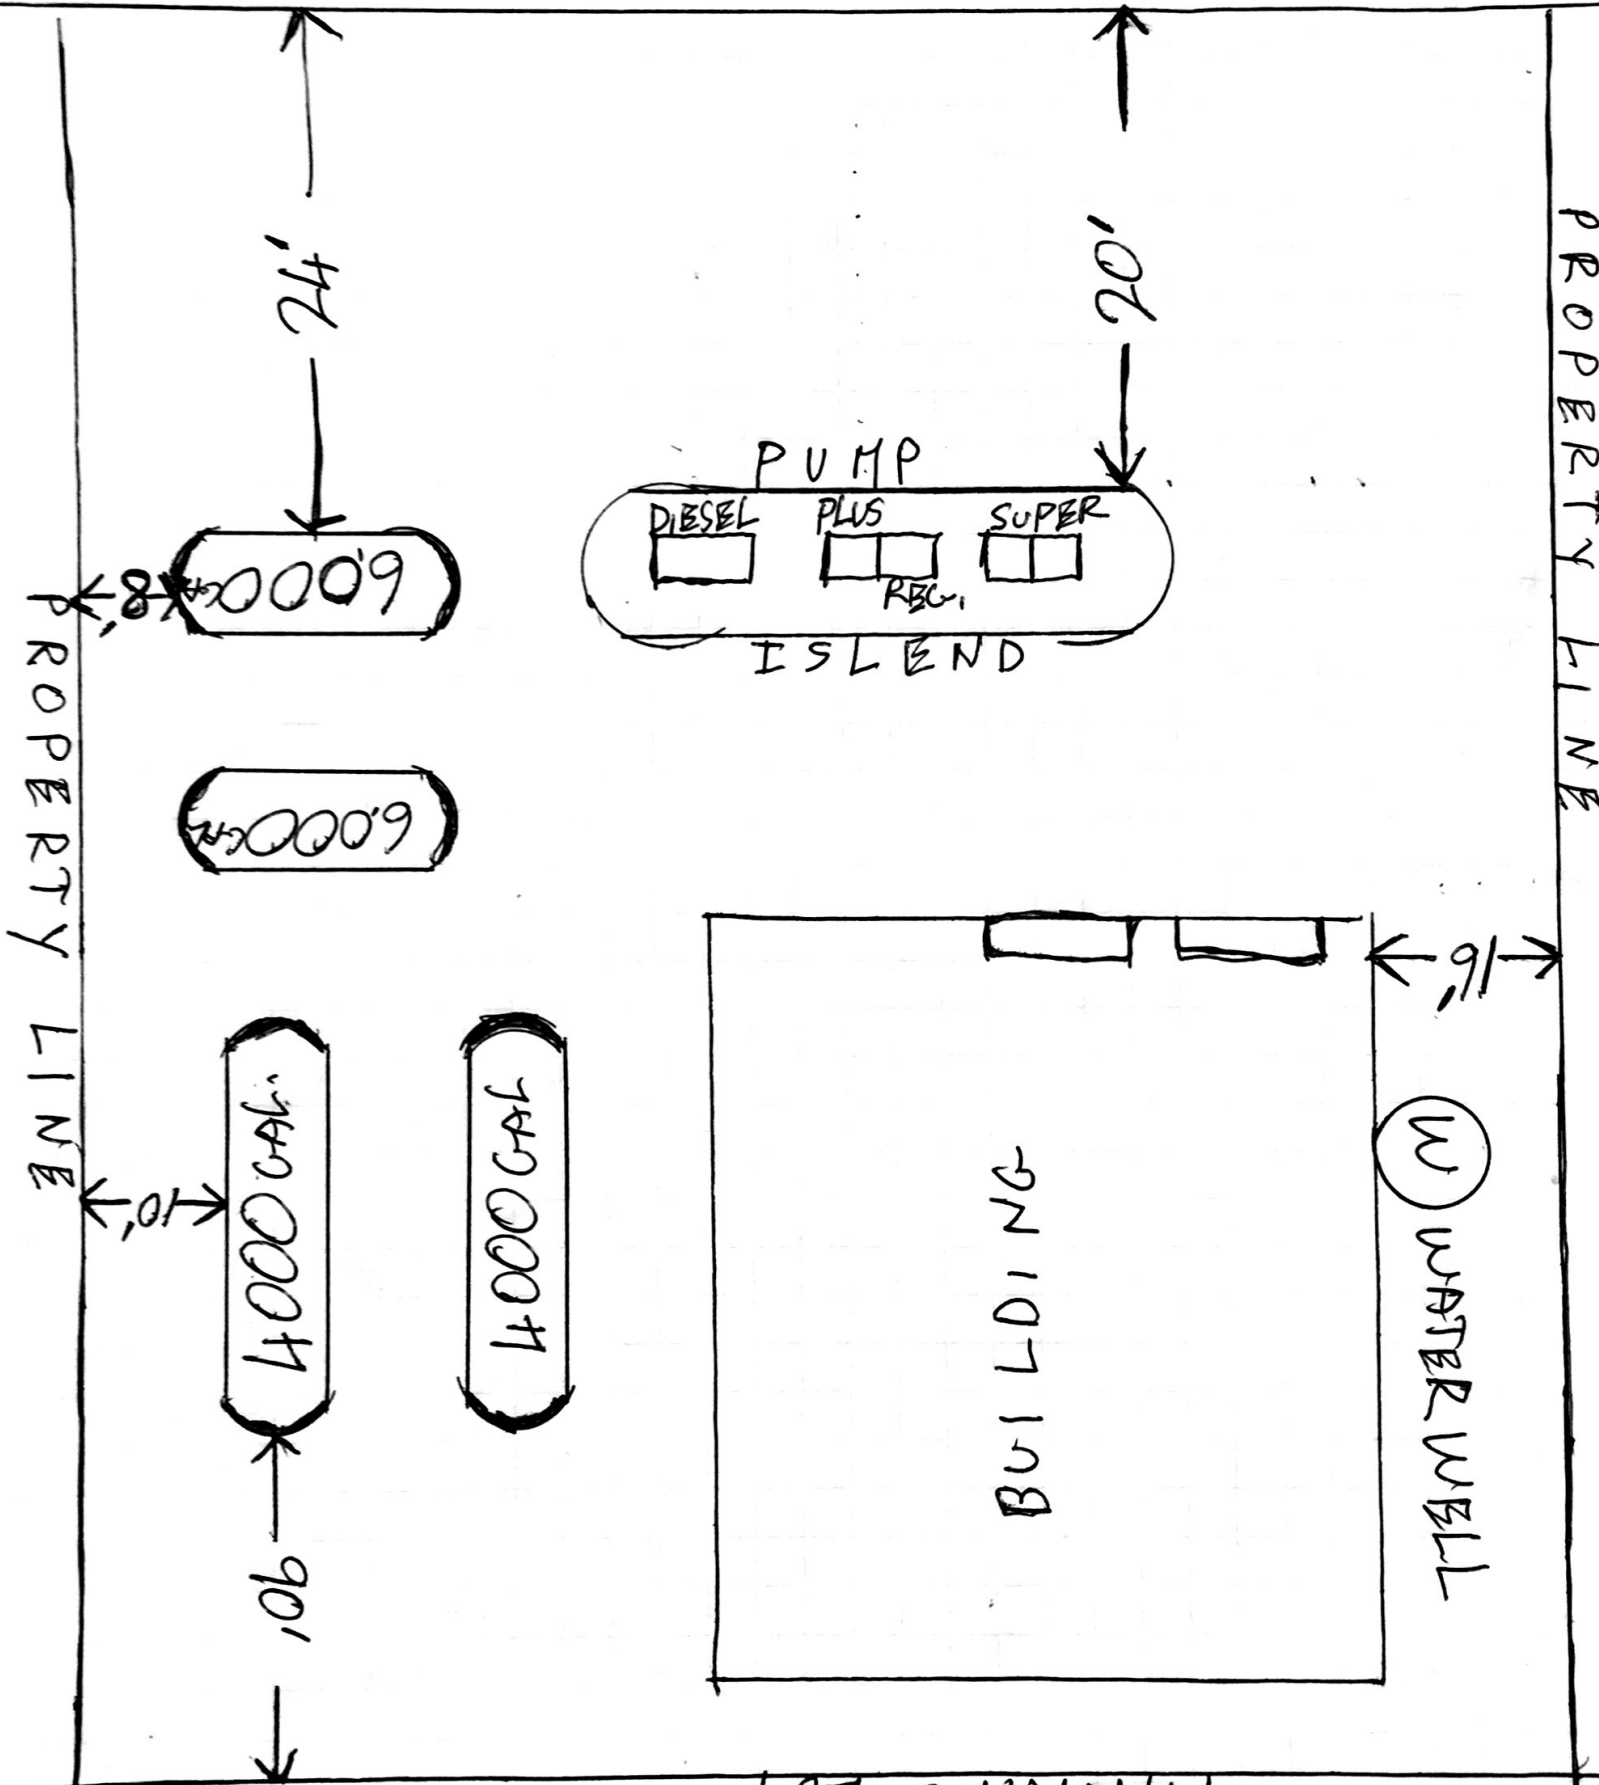

Todd Ghiosay
Division of Spill Management

1.0 INTRODUCTION AND OBJECTIVES

Land Tech Remedial, Inc. (LTR) was contracted by the New York State Department of Environmental Conservation (NYSDEC) to conduct a subsurface investigation at the village of Scotts Corner, Town of Pound Ridge, NY to determine the source or sources of gasoline hydrocarbons found in a number of the towns potable water wells. The location of the subject area is shown on Figure 1. In addition to directly conducting investigation work, LTR has also provided oversight of activities conducted at the Shell Oil site at Scotts Corner by Shell's consultant, EnviroTrac.

Petroleum hydrocarbons were first detected in potable supply wells following sampling of the Pound Ridge Cleaner's well, located at 72 Westchester Avenue, in July of 1993. Further sampling conducted in the latter half of 1994, indicated that petroleum hydrocarbons were present in a large percentage of the potable wells located along Westchester Avenue in Scotts Corners. Additional sampling of potable wells in early 1995 indicated the area of impact included homes located on Trinity Lane, Lower Trinity Pass, and Trinity Pass roads.

Following a Town Meeting at Scotts Corner on February 1, 1995 to discuss this issue, Shell Oil was directed by the NYSDEC to begin a subsurface investigation at their site, located at 66 Westchester Avenue. Land Tech Remedial was contracted by the NYSDEC to conduct a subsurface investigation at the Texaco Station located at 77 Westchester Avenue.

2.0 SUBSURFACE INVESTIGATION OF TEXACO STATION, 77 WESTCHESTER AVENUE

2.1 Monitoring Well Installation and Sampling (Overburden Wells)

On February 9, 1995, LTR installed three overburden monitoring wells (MW-1, MW-2, and MW-3) at the Texaco site (Figure 2). The overburden material at the site consisted primarily of silty sands, with abundant gravel and cobbles. Groundwater was encountered at about 7 to 8 feet below grade. Bedrock was encountered at depths of 18 feet, 12 feet, and 16 feet respectively in the three borings. Hydrocarbon odors were detected while drilling monitoring wells MW-2 and MW-3. The wells were completed using four-inch diameter PVC well screen and solid to depths of 20 feet, 14 feet, and 16 feet, respectively. The annulus space was packed with No. 2 Morie gravel, and the wells were capped with bolt down curb boxes. Boring logs for the three wells are located in Appendix 1.

The monitoring wells were sampled on three different dates: 2/13/95, 2/24/95, and 6/15/95. All three monitoring wells were sampled on 2/13/95 and 6/15/95, and only MW-2 and MW-3 were sampled on 2/24/95. The samples collected on 2/13/95 and 6/15/95 were analyzed for volatile organic compounds (VOCs) via EPA Method 602. The samples collected on 2/24/95 were analyzed for VOCs using LTR's mobile laboratory via modified method 3810. Additionally, the three wells and the Texaco site were surveyed on 2/13/95. The survey and depth to water data were used to determine the groundwater flow direction in the overburden materials underlying the Texaco site. Monitoring well specification information is supplied on

4.0 SUMMARY OF OVERBURDEN SAMPLING

Both the Shell and Texaco station have dissolved phase hydrocarbons in the overburden. The presence of the hydrocarbons in the overburden at each site is most likely from spills that occurred at those sites; not the result of an off-site impact.

Significant concentrations of BTEX and MTBE compounds were found at the Texaco site in monitoring wells, MW-2 and MW-3, as well as geoprobe points B-17 and B-18. However, based on groundwater flow directions and additional sampling, this contamination does not appear to have migrated significantly off-site, implying that the spill volume was not extremely large. Impact to potable wells would have to be directly through the bedrock from the site.

Significant concentrations of BTEX and MTBE compounds were also found at the Shell site in all monitoring wells, except MW-2 and MW-9, as well as geoprobe points B-6, B-7 and B-10. Off-site impacts were found to the northwest in borings B-8, B-9, and B-12, and to the northeast in borings B-22, B-23, B-27, and B-28. The extent of the dissolved-phase plume in the overburden suggests a greater magnitude spill than that found at the Texaco station. Lithology may also play some role in explaining the extent and geometry of the two plumes. Although MTBE is found off-site from the Shell station, the direction does not suggest that the overburden plume is playing a big role in defining the extent of the MTBE found in the potable wells. The most likely path is directly into the bedrock on-site where it is then transported by both the natural hydraulic flow and flow induced by the pumping of the potable bedrock wells.

5.0 POTABLE WELL SAMPLING RESULTS

A summary of the potable well sampling results is given in Figure 8. Based on samples collected during February, 1995 a general MTBE isoconcentration map has been prepared (Figure 9). The contour interval is by orders of magnitude from 1 ppb to 1,000 ppb. With only a few exceptions the MTBE concentrations decrease consistently in every direction from a central area located near 68 Westchester Avenue and 26 Trinity Lane. It appears by the very large aerial extent and consistent MTBE concentration gradient that bedrock fractures do not play a significant role in controlling the distribution of MTBE in the bedrock. What does appear to be controlling the distribution of MTBE is the location of pumping wells.

Based on the geometry of the MTBE isocontour map the most likely source is the Shell Station. If Texaco is contributing significantly to the MTBE contamination then one possibility is that MTBE has traveled as a spike away from the Texaco station, and the highest levels are now near the 66 Westchester Avenue. This would mean that at some time concentrations higher than those seen now were pumped from wells located between 68 Westchester Avenue and the Texaco Station. Groundwater data collected from potable well located at 72 Westchester Avenue (Pound Ridge Cleaners) did not show MTBE concentrations above 5 ppb from July 1993 through February 1994. The first sample showing increased MTBE concentrations at 250 ppb was in July, 1994. The highest concentration found in this well was 530 ppb in August 1994. MTBE concentrations have never been in the 1,000 ppb

range suggesting that the high MTBE levels found on Trinity Lane did not migrate from the Texaco site as a spike.

The second possibility previously considered was that an extremely narrow fracture could migrate down Westchester Avenue, by-passing potable wells located between 66 Westchester Avenue and the Texaco Station. However, based on the results obtained from bedrock well BR-2, which is located on Westchester Avenue, this theory is highly unlikely. Additionally, as mentioned previously, the very large aerial extent and consistent MTBE concentration gradient suggests that bedrock fractures do not play a significant role in controlling the distribution of MTBE in the bedrock. One could also argue that the depth of potable wells may skew the data, however the consistent MTBE concentration gradient suggests there are not radical differences in completion depths.

6.0 SUMMARY

■ TEXACO SERVICE STATION SITE

Hydrocarbon impact to the overburden aquifer in the vicinity of the Texaco site has been identified. The impact to the shallow groundwater in this area has been delineated as extending from the pump islands and the UST area to approximately 30 feet off-site, underneath Westchester Avenue. Both BTEX and MTBE compounds were found on site. Floating product was found in monitoring well MW-3 downgradient of the pump island.

Based on the potable well sampling of the adjacent wells and sampling results from BR-1 and BR-2, Texaco appears to be impacting the bedrock aquifer. Sampling of monitoring well BR-1 suggests a contribution in the range of 100 ppb MTBE or less at depths similar to local potable wells. Offsite potable wells immediately adjacent to the site range from non-detect to 120 ppb.

■ SHELL SERVICE STATION SITE

Hydrocarbon impact has been identified in the overburden aquifer in the vicinity of the Shell station. The extent of the plume has been shown to migrate from the Shell Station toward the northeast; across Westchester Avenue and into the area of the Post Office. Based on the sampling of adjacent potable wells, Shell appears to be the principle contributor to the MTBE impact found at Scotts Corner. Offsite potable wells located immediately adjacent to the Shell site range from 2.5 to 7,200 ppb.

RE: Third Quarter 1996; Groundwater Quality and Remediation System Report

Dear Mr Difulvio:

Please find enclosed the 1996 third quarter report for Town and Country Auto Repair located at 77 Westchester Avenue in Pound Ridge New York. The report presents the results of monthly remediation system monitoring and quarterly groundwater monitoring conducted on August 14, 1996. Thank you in advance for your assistance in this matter. If you have any questions, call the undersigned at (203) 261-2673.

Respectfully,
Land Tech Remedial, Inc.

David A. Fontaine,
Project Manager

1.0 INTRODUCTION

Land Tech Remedial (LTR) was retained by Mr. John Difulvio to remediate hydrocarbon impacted soils and groundwater at Town and Country Auto Repair located at 77 Westchester Avenue in the Village of Scotts Corner, Town of Pound Ridge New York (Figure 1, Appendix 1). An area wide study was directed by the NYSDEC to determine the source of the domestic well contamination. LTR was the NYSDEC's subcontractor in this study and issued the Subsurface Environmental Site Investigation in July of 1995. This LTR investigation revealed two (2) potential sources of contamination in the area. The Town and Country Auto Repair Site was identified as one source and a service station located 0.1 mile south east was identified as the other source. The second source was determined to be the primary contributor of contamination to the domestic wells. After LTR fulfilled its contract with the NYSDEC for the area wide study, Mr. Difulvio retained LTR to delineate and remediate hydrocarbon contamination specifically found on the Town and Country Auto Repair Site.

A remediation system employing soil vapor extraction technology combined with groundwater sparging was designed. Installation began in October of 1995. The SVE elements of the system were completed and put into operation on May 17, 1996. The system was closely monitored after start up. An air sparging unit was added on July 2, 1996, and a moisture separator was installed on July 18, 1996.

The system is currently in operation and is inspected by LTR on a monthly basis. Groundwater at the Site is sampled by LTR on a quarterly basis to monitor the effect of the remediation system on the groundwater quality. This is the first quarterly report and includes remediation system inspection reports and groundwater quality analysis.

2.0 GROUNDWATER SAMPLING

2.1 Groundwater Flow Determination

On August 14, 1996 fluid depths were gauged in four (4) overburden wells and one bedrock well. No free phase hydrocarbon product was detected during this Site inspection. Overburden monitoring well MW-A was sampled instead of bedrock monitoring well BR-2 due to a misidentification in the field. Groundwater ranged from 6.51 to 8.43 feet below grade (ftbg) in the overburden wells. Depth to water in the bedrock, measured at BR-1, was 18.64 ftbg. Table 1 shows depth to water and relative monitoring well casing elevations based on an assigned project datum of 100.00 feet. Groundwater contours are presented on Figure 2 in Appendix 1. The initial hydrogeologic report, issued by LTR in July 1995, indicated a groundwater flow direction to the west. Based on the August 14, 1996 data the groundwater underlying the Site continues to flow in a westerly direction.

Table 1 Groundwater Elevation Data

Well ID	TOC Elevation (feet)	Depth to Water (feet)	GW Elevation (feet)	Depth To Product (feet)	Product Thickness (feet)	Corrected GW Elevation (feet)
MW-1	99.53	7.41	92.12	0	0	92.12
MW-2	99.29	7.43	91.86	0	0	91.86
MW-3	99.17	8.14	91.03	0	0	91.03
MW-A	not surveyed	6.51	NA	0	0	NA
BR-1	99.17	18.64	80.53	0	0	80.53

"NA" = Not Applicable

2.2 Groundwater Sampling

On August 14, 1996 groundwater samples were collected from five (5) monitoring wells (MW-1, MW-2, MW-3, MW-A, and BR-1).

Prior to collecting groundwater samples, three (3) standing volumes of water were purged to obtain a representative groundwater sample. Samples were collected in 40 ml vials designed for volatile organic analyses. The samples were transported in a cooler with ice under proper chain-of-custody to a New York certified laboratory (NYS ID #11393).

2.3 Groundwater Analytical Results

Benzene was found in exceedance of the New York State Extraction Guidance Values (EGV's) at two wells on Site, MW-2 and MW-3. Benzene concentrations at MW-2 and MW-3 were 11 ppb and 230 ppb, respectively, with an EGV for benzene of 0.7 ppb.

Toluene was found in exceedance of the EGV at two wells on Site, MW-2 and MW-3. Toluene concentrations at MW-2 and MW-3 were 200 ppb and 1,900 ppb respectively with an EGV for toluene of 5 ppb.

Ethylbenzene was found in exceedance of the EGV at two wells on Site, MW-2 and MW-3. Ethylbenzene concentrations at MW-2 and MW-3 were 23 ppb and 140 ppb, respectively, with an EGV for ethylbenzene of 5 ppb.

Mr. John Difulvio
Pound Ridge 3rd Quarter Report
9/23/96

Total xylenes were found in exceedance of the EGV at two wells on Site, MW-2 and MW-3. Total xylene concentrations at MW-2 and MW-3 were 2,110 ppb and 2,100 ppb respectively with an EGV for xylenes of 5 ppb.

Methyl Tertiary Butyl Ether (MTBE) was found in exceedance of the EGV at two wells on Site, MW-2 and MW-3. MTBE concentrations at MW-2 and MW-3 were 200 ppb and 9,000 ppb respectively with an EGV for MTBE of 50 ppb.

Chlorobenzene was found in MW-3 with a level of 1.2 ppb. No EGV values for chlorobenzene have been established. MW-3 is also the most impacted well on site with a total BTEX value of 4,370 ppb. MW-2 is the second most impacted well on site with a total BTEX value of 2,344 ppb.

Table 2 Groundwater Analytical Results

Well ID	Benzene (ppb)	Toluene (ppb)	Ethyl-benzene (ppb)	Xylene (ppb)	Total BTEX (ppb)	MTBE (ppb)	Chlorobenzene (ppb)
MW-1	ND	ND	ND	ND	ND	6	ND
MW-2	11	200	23	2,110	2,344	200	ND
MW-3	230	1,900	140	2,100	4,370	9,000	ND
MW-A	ND	ND	ND	4.1	4.1	15	ND
BR-1	ND	ND	ND	ND	ND	33	1.2
EGV	0.7	5	5	5	NA	50	NA

ND = not detected

NA = not applicable

EGV = Extraction Guidance Value for New York State

Laboratory analytical reports and chain-of-custody reports are contained in Appendix 2. A map, showing water quality results is presented as Appendix 1 Figure 3

Based on historical groundwater quality information, collected during the area wide investigation in June of 1995, groundwater quality at the Site has improved. Hydrocarbon levels at MW-2 and MW-3, installed adjacent to the SVE/Air Sparging well network, have reduced substantially (see Appendix 1, Figure 3). This suggests that the remediation system is responsible for the improvement rather than amelioration since the last groundwater sampling event. Free phase product is no longer present in MW-3.

3.0 GROUNDWATER SPARGING AND SOIL VAPOR EXTRACTION SYSTEM

A soil vapor extraction system (SVE), consisting of five (5) soil vapor extraction points, combined with a groundwater sparging system, consisting of (5) groundwater sparging points, was installed beginning in October of 1995 (see Figure 4, Appendix 1). The SVE elements of the system were started on May 17, 1996. The sparging system was started on July 2, 1996.

Inspections of the system were conducted on July 2, 1996, July 18, 1996, August 14, 1996, and September 13, 1996. The air sparging system only operates 15 minutes each daylight hour. It was off at the time of effluent sampling. A photo ionization detector was used to obtain effluent air quality data during all these inspections except the September 13, 1996 inspection. Also, influent pressure, effluent temperature, sparging system pressure information was obtained. The data collected during inspections are contained in Table 3.

Table 3, Remediation System Inspection Data

SPARGE SYSTEM		SVE SYSTEM			
INSPECTION DATE	SPARGING PRESSURE (PSI)	SVE PRESSURE (" WATER)	INFLUENT PID READING	MIDDLE PID READING	EFFLUENT PID READING
7/2/96	4	65	322	83.9	24.4
7/18/96	4	38	NS	NS	10.2
8/14/96	5	45	NS	NS	12.8
9/13/96	off	40	NS	NS	NS

"NS = No Sample

An air effluent sample was obtained during the August 14, 1996 inspection. This sample was submitted to a NYS certified laboratory (NYS ID# 11393) under proper chain-of-custody and analyzed by EPA Method M18 and TO14. The analytical were expressed in parts per million by volume (ppmv). The results are contained in Table 4.

Table 4 Air Effluent Analytical Results

Sample Date	Benzene (ppmv)	Toluene (ppmv)	Ethyl-benzene (ppmv)	Xylene (ppmv)	Total BTEX (ppmv)	MTBE (ppmv)
8/14/96	0.78	0.94	0.67	1.54	3.9	ND

"ND" = None Detected

137
Mr. John Difulvio
Pound Ridge 3rd Quarter Report
9/23/96

The benzene air loading from the SVE system was calculated at 0.0014 lb/hr based on an SVE system flow of 130 cfm and a benzene concentration of 0.78 ppmv. This loading is well below the New York State regulatory criteria of 0.02 lb/hr. The initial benzene loading for the system, based on data collected during pilot studies on December 7, 1996 and was 0.0037 lb/hr.

4.0 FINDINGS

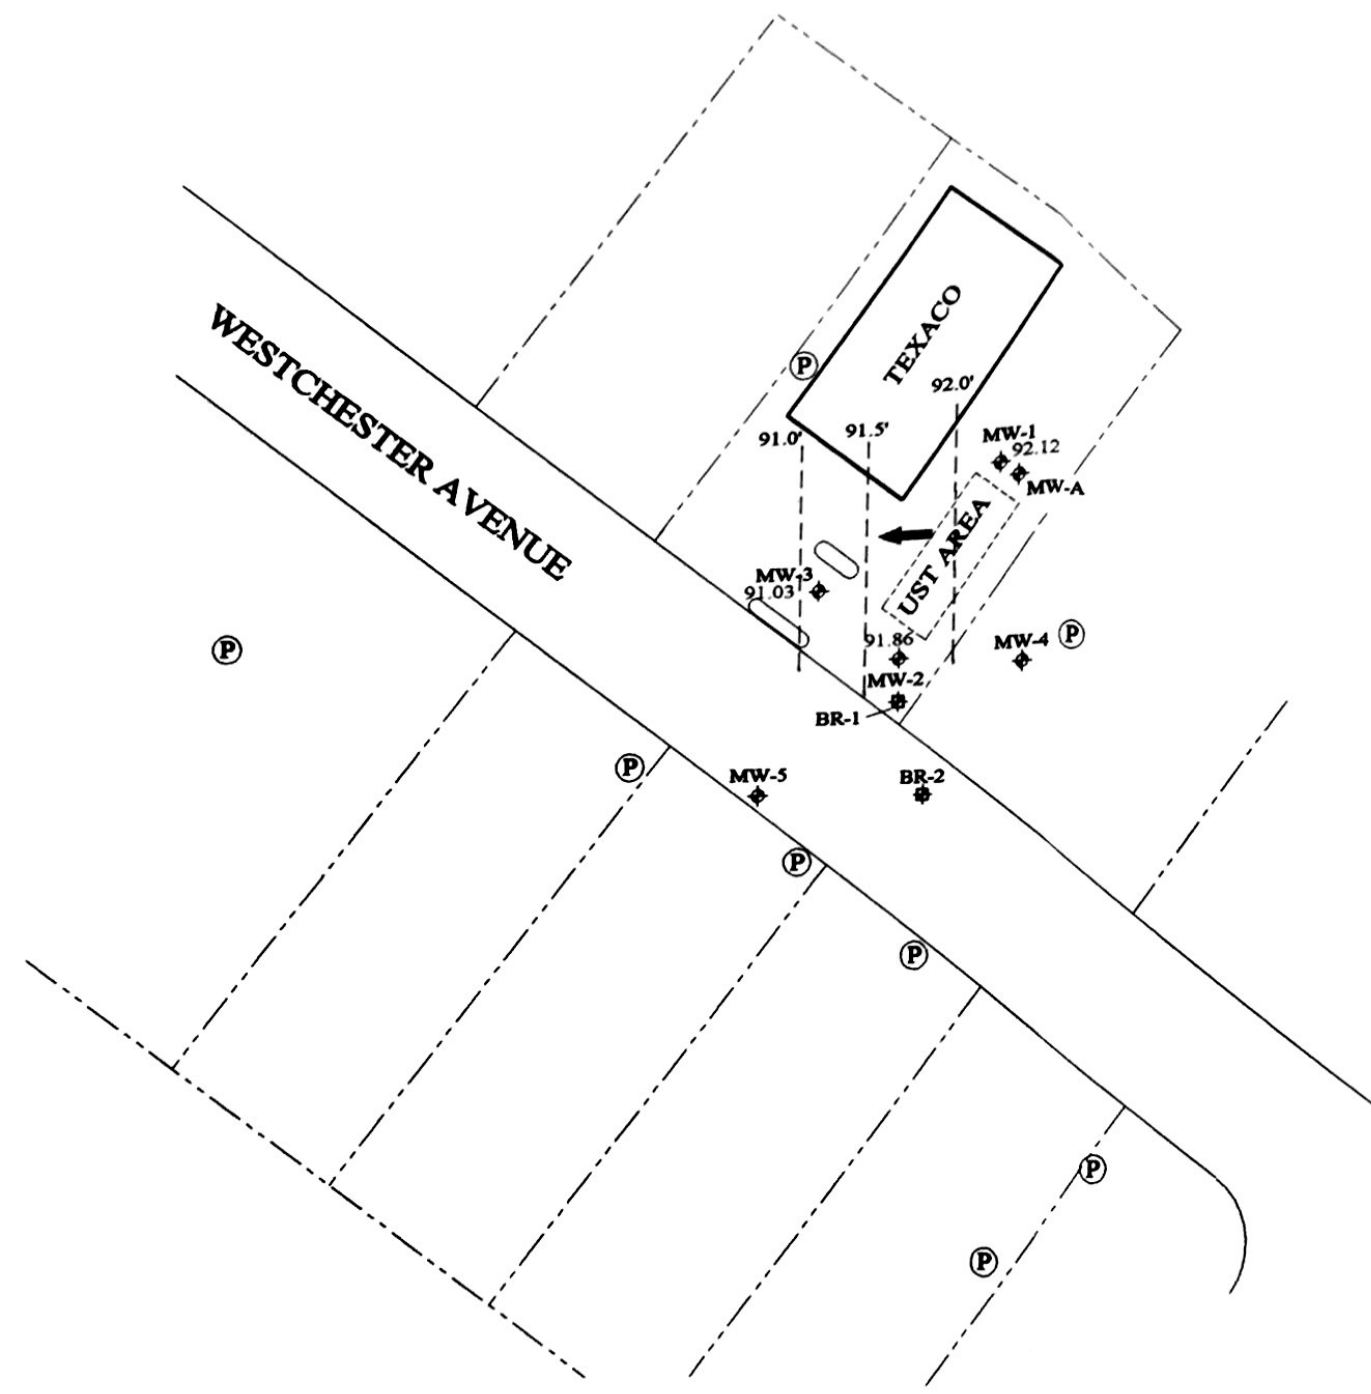

4.1 Groundwater Quality

- No free phase hydrocarbon product was detected during this quarter.
- MW-A was sampled instead of BR-2 due to a misidentification.
- BTEX compounds were found in monitor wells MW-2, MW-3, and MW-A.
- MTBE was found in all of the wells sampled and ranged from 6 ppb to 9,000 ppb across the Site.
- Extraction Guidance Values for Benzene, Toluene, Ethylbenzene, Total Xylenes and MTBE were exceeded in monitoring wells MW-2 and MW-3.
- Hydrocarbon levels have decreased substantially in MW-2 and MW-3. This suggests that the remediation system is effectively removing hydrocarbon compounds from the groundwater.

4.2 Remediation System Operation

- The SVE components of the remediation system were started on May 17, 1996.
- The sparging components of the remediation system were started on July 2, 1996.
- A moisture separator was added to the system on July 18, 1996.
- Analytical data for air effluent indicates that the system is discharging 0.0014 lb./hr of benzene which is well below the NYSDEC regulatory criteria of 0.02 lb./hr.

- No interstitial monitoring (873.2529)
- No impermeable barrier (873.2528)

Federal Violations

- No pressurized piping leak detection (40 CFR 280.41b)
- No piping cathodic protection (40 CFR 280.21c)
- No site assessment performed (40 CFR 280.72)
- No SPCC available (40 CFR 112.3)
- No secondary contain. at loading rack (40 CFR 112.7e4)
- No site security (40 CFR 112.7e9)

Comments:

Dye tested internal stop sink. Dye positive to surface of ground outside. Dye tested at 11:27 am
Shear valves on all 3 pumps must be anchored and brought up to level.
Last inventory was on 5/21/02 and previously 5/9/02, 4/29/02.

Further Action Required:

- 1 Register all unregistered tanks
- 2 Tanks must be tested by 6/3/02
- 3 Maintain inventory as required by code including monitoring wells and aboveground tanks.
- 4 Install leak detection systems
- 5 Inspect monitoring systems
- 6 Inspect aboveground tanks monthly
- 7 Label aboveground waste oil tank and label aboveground fuel tanks
- 8 Repair sewage from stop sink (violation Article VII section 873.761)
- 9 Have shear valves anchored and brought to level according to code by 6/7/02

Subject: Town & Country Auto Repair, Inc. in Pound Ridge, NY

Dear Mr. Kushwara,

I recently inspected Town & Country Auto Repair, Inc. located at 77 Westchester Avenue, Route 124 in Pound Ridge, NY (PBS # 3-449431). The violations of the Westchester County PBS Code that I found for their underground tanks include unregistered tanks, tanks overdue for testing, no inventory records, no leak detection, no secondary containment of pipes, and no inspection of monitoring systems. The aboveground tanks had no monthly inspection and no tank labels. I am referring this station to you because there is no pressurized piping leak detection for their underground tanks.

Re: Town & Country Auto Repair Inc.
77 Westchester Avenue
(T) Pound Ridge, Westchester County

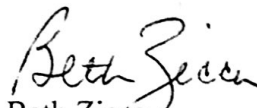

Dear Mr. DiFulvio:

The Westchester County Health Department informed our Department that there is a sink in the bay area at the above noted location which discharges to a dry well. This sink has been used to clean parts with degreasers.

This discharge of contaminants into groundwater is unacceptable and must be discontinued immediately. However, due to the U.S. Environmental Protection Agency's Underground Injection Control Program, EPA may need to perform a follow-up inspection. The sink should be plugged to prevent any further discharge. Please confirm in writing by July 20, 2002 that the sink has been temporarily sealed and all discharges have ceased.

By copy of this letter, we are referring your facility to the USEPA. After communication from USEPA, they will instruct you as to any further actions that may be required regarding compliance with EPA regulations. Your cooperation in this matter is appreciated.

Very truly yours,

Beth Zicca
Division of Water

FIELD ACTIVITY REPORT

Site	Town and Country Auto	NYSDEC Spill No.	0204941
Address	77 Westchester Ave	PBS No.	3-449431
Town	Pound Ridge	Municipality	
Contact Person	John DiFulvio	Date of Inspection	8/27/02
Telephone No.	(914) 764-5588	Time Responded	2:00 pm
		Time Departed	2:30 pm

ACTIVITY

Re-inspection of this site performed by C. Torres & K. Magnuson. TWO 4,000 gal VSTs and TWO 6,000 gal VSTs were removed. A 1000 gal underground heating oil tank was also removed. Contamination was found during tank removals and contaminated soil is properly staged and stockpiled on site. Tanks remaining on site include two 275 gallon heating oil tanks (aboveground) and a 275 gallon waste oil tank (aboveground). Slop sink has been removed.

- FURTHER ACTION REQUIRED**
- ① Properly dispose of stockpiled soil within 60 days.
 - ② Submit closure report
 - ③ Maintain monthly inspection of aboveground tanks.
 - ④ Submit Information Correction (PBS Application).

I acknowledge receipt of this inspection report.	Inspector	Karen Magnuson	Telephone No.	(914) 813-5621
Representative's Signature	John DiFulvio	Karen Magnuson		

UST CLOSURE REPORT

Town and Country Auto Repair
77 Westchester Avenue
Pound Ridge, New York
NYSDEC Spill No. 02-04541
NYSDEC PBS No. 3-449431

Prepared For:

Town and Country Auto Repair
77 Westchester Avenue
Pound Ridge, New York

Prepared By:

Ira D. Conklin & Sons, Inc.
94 Stewart Avenue
Newburgh, New York

September 30, 2002

1.0 Introduction

Ira D. Conklin & Sons, Inc. of Newburgh, New York (IDC), was contracted by Town and Country Auto Repair to conduct an underground storage tank (UST) closure report at their facility located at 77 Westchester Avenue, Pound Ridge, New York (**Figure 1**). The site is used as a service station and automobile repair shop. The activities conducted at the site were performed in accordance with all local, state and federal regulations.

IDC excavated one (1) 6,000 gallon gasoline, one (1) 6,000 gallon diesel, two (2) 4,000 gallon gasoline UST's at the site. Town and Country Auto Repair personnel legally abandoned one (1) 1,000 gallon fuel oil UST.

The objectives of this UST closure report are to identify and characterize any contamination that may exist in soil and/or groundwater in the vicinity of the UST's. This report summarizes all site characterization activities that were conducted by IDC at the above referenced location. This report does not address any additional environmental concerns that may be associated with the site.

4.0 Site Activities

Site activities included the excavation and removal of one (1) 6,000 gallon gasoline, one (1) 6,000 gallon diesel UST, two (2) 4,000 gallon gasoline UST's, and one (1) 1,000 gallon #2 fuel oil UST. In addition, the soils were screened with a PID meter, sampled and analyzed by a New York State Department of Health (NYSDOH) certified laboratory. Impacted soils were encountered during the excavation procedure and spill number 02-04541 was assigned to the site. The procedure and findings of these activities are outlined below.

4.1 UST Removal Operations

4.1.1 Excavation 1

IDC personnel conducted the following site work on the given dates:

08-09-02 Excavated and removed one (1) 6,000 gallon diesel UST and one (1) 6,000 gallon gasoline UST.

Field screened soils within excavation

Stockpiled impacted soils.

08-12-02 Excavated and removed two (2) 4,000 gallon gasoline UST's

Field screen soils removed from excavation with PID.

Stockpiled impacted soils.

08-13-02 Stockpiled impacted soils.

Collect exit soil samples from excavation 1.

All UST's were pumped out to remove any remaining product before excavation commenced. The soils above and surrounding the UST's were excavated until the top of the tanks were encountered at approximately (3) three feet below ground surface. Excavation activities continued until there was enough space around the tanks to facilitate removal without damage.

The soils within the excavation were screened with a PID meter for total organic vapor concentrations during tank removal operations. Any soils displaying positive PID readings were removed and stockpiled. The following readings were observed:

Soil Screening Results	
Sample Location	PID Readings (ppm)
Tank Wall A	169.4
Tank Wall B	211.3
Tank Wall C	148.5
Tank Wall D	85.6
Excavation Floor	223

Note: ND = nondetect

Further excavation could not be conducted along wall B due to the presence of an adjacent building and along wall C due to the presence of Westchester Avenue. Groundwater was encountered at approximately fifteen (15) feet below grade. A noticeable sheen was present on the surface of the water. No groundwater sample was obtained from the excavation due to the intrusive nature of the tank removal operations. A series of monitoring wells already exist on-site. Bedrock was not encountered during the excavation procedures. The soils within the excavation were comprised of backfill material and sandy soils.

Once the tanks were lifted from the subsurface, they were placed in a secure area for final inspection and cleaning. The tanks were then rendered useless by cutting a window at the end of each tank. After final cleaning, the tanks were visually inspected. The UST's were double wall STIP-3 tanks. The condition of the tanks was as follows:

Tank Condition	
Tank	Condition
6,000 gallon gasoline UST	Fair condition – pitting and corrosion present.
6,000 gallon diesel UST	Fair condition – pitting and corrosion present.
4,000 gallon gasoline UST	Fair condition – pitting and corrosion present.
4,000 gallon gasoline UST	Fair condition – pitting and corrosion present.

4.1.2 Excavation 2

IDC personnel conducted the following site work on the given dates:

08-13-02 Field screened and sampled soils present beneath one (1) 1,000-gallon #2 fuel oil UST.

The UST was pumped out to remove any remaining product before excavation commenced. The soils above and surrounding the UST were excavated until the top of the tank was encountered at approximately (3) three feet below ground surface. Excavation activities continued until there was enough space around the tank to allow access to the interior of the UST.

The interior of the tank was visually inspected for the presence of any penetrations. No obvious signs of releases were noted from the interior of the UST. A hole was drilled in the bottom of the tank to allow access to the soils beneath the tank. The soils were field screened with a PID. No positive readings were detected. A soils sample was collected from beneath the UST and analyzed via EPA Test Method 8260 and 8270.

4.2 Soil Removal and Disposal

A total of 176.01 tons of soil was removed from the site and disposed of at TPS Technologies, Inc., located in New Windsor, NY.

5.0 Sampling and Analytical Results

5.1 Sampling Procedure

5.1.1 Soil Sampling

Soil sampling at the site was conducted in accordance with NYSDEC Guidance Document "SPOTS 14". IDC collected one (1) grab soil sample from each wall and the bottom of excavation 1 and one (1) composite soil sample from beneath the UST within excavation 2. The soil samples obtained from the walls were collected 1/3 from the bottom of the excavation. IDC technicians used latex gloves while collecting the soil samples and immediately placed the sample jar in a cooler for preservation and delivery to York Laboratories located in Stamford, Connecticut (NYSDOH certified laboratory). The soil samples were analyzed for Volatile Organic Compounds by EPA Method 8260 and 8270. The samples were identified as follows on the laboratory data sheets:

Laboratory Analysis – Excavation 1	
Sample Identification	Sample Location
Walls	3993A
Bottom	3993B

Laboratory Analysis – Excavation 2	
Sample Identification	Sample Location
Exit	3993C

5.1.2 Groundwater Sampling

Groundwater was not sampled during the excavation procedures.

5.2 Laboratory Analytical Results

5.2.1 Excavation 1

The soil samples obtained from the walls and bottom of excavation 1 shows that the remaining soil meets the NYSDEC Recommended Soil Clean-Up Objectives as laid out in the TAGM #4046. The laboratory analysis is included in **Appendix A**.

5.2.2 Excavation 2

The soil sample from excavation 2 showed non-detect (ND) levels for all parameters analyzed. The York Labs Technical report is included in **Appendix A**.

6.0 Summary and Recommendations

6.1 Summary

The following summarizes the findings of the site assessment, UST removal and soil analytical results.

- Excavation and disposal of one (1) 6,000 gallon gasoline UST (excavation 1).
- Excavation and disposal of one (1) 6,000 gallon diesel UST (excavation 1).
- Excavation and disposal of two (2) 4,000 gallon gasoline UST's (excavation 1).
- Final field screening did reveal the presence of elevated levels of contaminants within the excavation. However, laboratory results of the excavation 1 soil samples did not reveal the presence of any petroleum constituents.
- Legal abandonment of one (1) 1,000 gallon #2 fuel oil UST by Town and Country personnel (excavation 2).
- Final field screening and laboratory results of the excavation 2 soil sample did not reveal the presence of any petroleum constituents.
- A total of 176.01 tons of contaminated soil was removed and disposed of at TPS Technologies Inc., New Windsor, New York.

6.2 Recommendations

Based on observations during the UST removal activities and the resulting soil analytical results, IDC recommends sampling of the on-site monitoring wells to determine groundwater quality at the site. Further delineation may be required based on the results of monitoring well sampling.

ASTM E 1527-13 PHASE I ENVIRONMENTAL SITE ASSESSMENT

USER QUESTIONNAIRE

Section 1 - General

The information requested in this section is intended to assist the environmental professional but is not necessarily required to qualify for one of the Landowner Liability Protections (See Section 2).

(1.) Why is the Phase I Environmental Site Assessment required?

Before taking title to the property the Town of Pound Ridge needs to determine if there is any contamination present.

(2.) What is the type of property and type of property transaction (sale, purchase, exchange, etc.)? The property is currently in use as a motor vehicle repair shop, auto body repair shop and also residential.

It is being acquired through an in rem tax foreclosure proceeding.

(3.) What is the complete and correct address of the property?

77 Westchester Avenue, Pound Ridge, NY 10576

(4.) What is the scope of services desired for the Phase I?

As described in the contract / work scope Yes No

If No, please explain.

Are any considerations beyond the requirements of Practice E 1527 to be addressed?

Yes No

If Yes, please explain.

(5.) Please identify all parties who will rely on the Phase I report.

The Town of Pound Ridge and any related regulatory agencies.

(6.) Please identify the site contact and how the site contact can be reached.

Richard B. Lyman,

Town Supervisor

Town House, 179 Westchester Avenue, Pound Ridge NY 10576

(914) 764-3985 (Town Office)

(914) 764-5407 (Home Office)

(914) 329-8188 (Mobile)

RLyman@townofpoundridge.com

(7.) Are there any special terms and conditions that must be agreed upon by the environmental professional? *NO*

(8.) Do you have any knowledge or experience with the property that may be pertinent to the environmental professional (prior environmental reports, documents, correspondence, etc. concerning the environmental condition of the property). Attach additional sheets if required.
None other than as already described.

(9) Does the user intend to retain a title company or title professional to review reasonable ascertainable title and judicial records for environmental liens or activity and use limitations (AULs)?

Yes No

If Yes, will the results of the review be provided to the environmental professional?

Yes No

Section 2 - Landowner Liability Protections

In order to qualify for one of the Landowner Liability Protections (LLPs)¹ offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

(1.) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law? *NO*

¹ Landowner Liability Protections, or LLPs, is the term used to describe the three types of potential defenses to Superfund liability in EPA's Interim Guidance Regarding Criteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability ("Common Elements" Guide) issued on March 6, 2003.

(2.) Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs , such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? NO

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? If "yes", please explain. NO

(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? N/A

(5.) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

(a.) Do you know the past uses of the property?

Yes. Originally a gasoline filling station and auto repair shop as well as an auto body shop. USTs were removed under permit from NYSDEC.

(b.) Do you know of specific chemicals that are present or once were present at the property? NO

(c.) Do you know of spills or other chemical releases that have taken place at the property? NO

(d.) Do you know of any environmental cleanups that have taken place at the property?

As noted in A. above, USTs were removed under NYSDEC permit.

(6.) The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

None other than the past and current uses.

User Signature

I have answered the above questions in good faith and based on my knowledge of the property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

EXECUTIVE SUMMARY

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 3 RCRA-CESQG sites within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/16/2015 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/16/2015 has revealed that there are 23 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, and dated 11/23/2015 has revealed that there are 3

EXECUTIVE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/16/2015 has revealed that there are 4 NY Spills sites within approximately 0.125 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto

EXECUTIVE SUMMARY

site within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

HARDY 11/21/2000 LETTER SENT TO CULLIGAN WATER CONDITIONING; INVOICE FOR WORK FOR POUND RIDGE RETURNED. INCORRECT SPILL BEING CHARGED. 11/09/2000 LETTER SENT TO EQUIVA BY J. HARDY; DEC REQUIRES THAT EQUIVA SUBMIT A WORKPLAN FOR EVALUATION OF ALTERNATIVE MEANS TO EXPEDITE CLEANUP AT THIS SITE. 08/28/08 Town & Country has failed to abide by the terms of the consent order which required sampling and POET maintenance at properties assigned to them. After consultation with William Buss, case attorney from the NYS Office of the Attorney General, the DEC will now resume those tasks at those properties. Groundwater and Environmental Services who previously managed the case has been rehired. TG 10/01/15 Case update. All POET systems installed and maintained under the DEC PIN have been removed and no further charges to this PIN are anticipated. Motiva (Shell) continues to perform maintenance and testing of nine POET systems as required by the 2006 STIP. TG"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was WCHD-GOREAU 6-09-04 Met with: Francis Onaga ESPL Environmental Consultants 106 W 32nd St NY NY 10001 (212) 330-7501 7505-fax A 550 lusted was removed and along with contaminated soil. A sump in the basement in the vicinity of the former tank location contained a significant layer of floating product. The sump pump is pumping water into a 550 gallon holding tank outside the basement. However little free product is being recovered because the pump is a bottom loading pump, thus the oil remains on top of the groundwater in the sump. Suggested to Francis that other methods of recovering the oil should be employed. He will have the oil removed via a vac truck and will consider a scavenger pump or a belt skimmer. He also wants to set up a O/W separator and carbon system as a long term remediation plan. I told him to submit it in writing for inclusion in a STIP once he develops a plan. TG 01/04/05 Remediation report rec'd from Conrad Geoscience. Based on the info contained in that report, no further action required. TG"
Remarks: "550 GALLON TANK APPARENTLY HAS A HOLE, AND OIL CO. IS PUMPING OUT AND WILL BE REPLACING: "

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2015	Source: EPA
Date Data Arrived at EDR: 04/08/2015	Telephone: N/A
Date Made Active in Reports: 06/22/2015	Last EDR Contact: 11/07/2015
Number of Days to Update: 75	Next Scheduled EDR Contact: 01/18/2016
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

	Data Release Frequency: Varies

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/09/2015

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/09/2015

State and tribal institutional control / engineering control registries

NY RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Date of Government Version: 11/18/2010	Source: NYC Department of City Planning

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

NY ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NY HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

	Data Release Frequency: Semi-Annually

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

NY E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers

Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

77 WESTCHESTER AVENUE AUTO REPAIR
77 WESTCHESTER AVENUE
POUND RIDGE, NY 10576

TARGET PROPERTY COORDINATES

Latitude (North):	41.1908 - 41° 11' 26.88"
Longitude (West):	73.5519 - 73° 33' 6.84"
Universal Transverse Mercator:	Zone 18
UTM X (Meters):	621440.6
UTM Y (Meters):	4560736.5
Elevation:	399 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940139 POUND RIDGE, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County
WESTCHESTER, NY

FEMA Flood
Electronic Data

Additional Panels in search area: 09001C - FEMA DFIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property
POUND RIDGE

NWI Electronic
Data Coverage
YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Leicester

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 4	Max: 5.5 Min: 4.5
2	7 inches	25 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 4	Max: 5.5 Min: 4.5
3	25 inches	59 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 4	Max: 6 Min: 4.5

Soil Map ID: 3

Soil Component Name: Chatfield

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 77 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

3	24 inches	59 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 4	Max: 6 Min: 4.5

Soil Map ID: 9

Soil Component Name: Urban land

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 10

Soil Component Name: Chatfield

Soil Surface Texture: loam

Hydrologic Group: Class C/D - Drained/undrained hydrology class of soils that can be drained and classified.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Nobis Engineering, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2015 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc. or its affiliates is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

<u>Year</u>	<u>Target Street</u>	<u>Cross Street</u>	<u>Source</u>

All Appropriate Inquiries Rule: Reporting Requirements Checklist for Assessment Grant Recipients

WHAT IS “ALL APPROPRIATE INQUIRIES”?

“All appropriate inquiries,” or AAI, is a process of evaluating a property’s environmental conditions and assessing the likelihood of any contamination. Every Phase I assessment conducted with EPA Brownfields Assessment Grant funds **must** be conducted in compliance with the All Appropriate Inquiries Final Rule at 40 CFR Part 312. The All Appropriate Inquiries Final Rule provides that the ASTM E1527-05 standard is consistent with the requirements of the final rule and may be used to comply with the provisions of the rule. In addition, all appropriate inquiries must be conducted in compliance with the Final Rule or the ASTM standard to obtain certain protections from liability under the federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA, aka Superfund).

WHAT ARE THE DOCUMENTATION REQUIREMENTS FOR ALL APPROPRIATE INQUIRIES?

The final rule requires that the results of an AAI investigation be documented in a written report. The specific reporting requirements for all appropriate inquiries are provided in 40 CFR §312.21 (*Results of Inquiry by an Environmental Professional*) and §312.31 of the final rule and in §12 of ASTM E1527-05. All AAI final reports **must**, at a minimum include the following:

1. An **opinion** as to whether the inquiry identified conditions indicative of releases or threatened releases of hazardous substances, and as applicable, pollutants and contaminants, petroleum or petroleum products, or controlled substances, on, at, in, or to the subject property.
2. An identification of “**significant**” **data gaps** (as defined in §312.10 of AAI final rule and §12.7 of ASTM E1527-05), if any, in the information collected for the inquiry. Significant data gaps include missing or unattainable information that affects the ability of the environmental professional to identify conditions indicative of releases or threatened releases of hazardous substances, and as applicable, pollutants and contaminants, petroleum or petroleum products, or controlled substances, on, at, in, or to the subject property. The documentation of significant data gaps must include information regarding the significance of these data gaps.
3. **Qualifications and signature** of the environmental professional(s). The environmental professional must place the following statements in the document and sign the document:
 - “[I, We] declare that, to the best of [my, our] professional knowledge and belief, [I, we] meet the definition of Environmental Professional as defined in §312.10 of this part.”
 - “[I, We] have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. [I, We] have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.”

Note: Please use either “I” or “We.”
4. In compliance with §312.31(b) of the AAI final rule and §12.6.1 of ASTM E1527-05, the environmental professional must include in the final report an **opinion regarding additional appropriate investigation**, if the environmental professional has such an opinion.

For each Phase I Environmental Site Assessment, or AAI, conducted using EPA Brownfields Grant monies, the grantee must complete, sign, date, and submit the following check list with any AAI reports submitted to EPA.

Also see U.S. EPA’s website at www.epa.gov/brownfields for additional information.

Checklist for Phase I Site Assessments Conducted using EPA Brownfields Assessment Grant Funds

Contact Information

Grantee Name: Town of Pound Ridge, New York

Grant Number: EP-W-11-043

ACRES Property ID: NA

Program Manager Name:
(Point of Contact) Richard Lyman

Contact Phone Number: (914) 764-3985

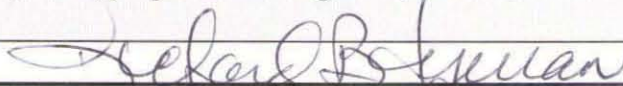

Name / Address of Property Assessed: 77 Westchester Avenue, Pound Ridge, New York

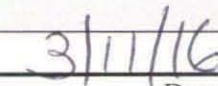

Checklist

Please indicate that each of the following All Appropriate Inquiries documentation requirements were met for the Phase I assessment conducted at the above listed property:

- An **opinion** as to whether the inquiry has identified conditions indicative of releases or threatened releases of hazardous substances, and as applicable, pollutants and contaminants, petroleum or petroleum products, or controlled substances, on, at, in, or to the subject property.
- An identification of "**significant**" **data gaps** (as defined in §312.10 of AAI final rule and §12.7 of ASTM E1527-05), if any, in the information collected for the inquiry, as well as comments regarding the significance of these data gaps. Significant data gaps including missing and unattainable information that affects the ability of the environmental professional to identify conditions indicative of releases or threatened releases of hazardous substances, and as applicable, pollutants and contaminants, petroleum or petroleum products, or controlled substances, on, at, in, or to the subject property.
- Qualifications and signature** of the environmental professional(s). The environmental professional must place the following statements in the document and sign the document:
 - "[I, We] declare that, to the best of [my, our] professional knowledge and belief, [I, we] meet the definition of Environmental Professional as defined in §312.10 of this part."
 - "[I, We] have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. [I, We] have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Note: Please use either "I" or "We."
- In compliance with §312.31(b) of the AAI final rule and §12.6.1 of ASTM E1527-05, the environmental professional must include in the final report an **opinion regarding additional appropriate investigation**, if the environmental professional has such an opinion.
