Supervisor Kevin Hansan  
Town of Pound Ridge  
179 Westchester Avenue  
Pound Ridge, New York 10576

May 7, 2024

Dear Supervisor Hansan.

AMAI is pleased to provide you with an overview of our drinking water sampling services.

AMAI is an environmental consulting firm with decades of experience sampling and monitoring groundwater, including drinking water.

We have collected samples for Per and Polyfluoroalkyl Substances (PFAS) in drinking water wells for approximately five years and our sampling Standard Operating Procedure (SOP) is based on New York State Department of Environmental Conservation policy.

AMAI works with several laboratories certified for drinking water analysis of PFAS in New York, including

SGS North America, Wilmington, DE  
EMSL Analytical, Cinnaminson, NJ  
Pace Analytical Services, East Long Meadow, MA  
Long Island Analytical, Holbrook, NY  
York Analytical Laboratories, Queens, NY

The laboratories are certified in New York to analyze PFAS compounds in drinking water by both Method 533 and Method 537.1. These methods are recommended by the State of New York to analyze for the PFAS regulated by the State of New York and the recently finalized USEPA Maximum Contaminant levels (MCLs).

The laboratories do not work directly with residents and it is therefore necessary to arrange with a third party for sampling of the well. AMAI will collect the samples, ship the samples to the laboratory, and prepare a letter report of the sampling results for the resident.

Please add our information to the Town PFAS Resource page.
